STATEMENTS BY DR. SELIGMAN:

4-7, 10, 16, 18-19, 21, 25, 33, 37-41, 43, 44, 46, 47,  
49-52, 55, 56, 58, 60-63, 65-67, 70, 74-77, 83-87,  
92-96, 98, 100, 101, 103, 104, 106, 108

STATEMENTS BY MR. UPDEGROVE:

37, 44, 57-59, 64, 68, 72-74, 78, 84, 103, 104, 108

WELCOME BY MR. DOMAGALA: 2

STATEMENTS BY AMBASSADOR DE BRUM: 6, 9, 15, 40-42

STATEMENTS BY MAYOR MATAYOSHI: 10, 61

STATEMENTS BY DR. WILLIAMS: 19, 37, 65, 76, 98

STATEMENTS BY MS. KEKUNA: 21, 22

STATEMENTS BY DR. VASWANI: 33, 41, 94-96

STATEMENTS BY MR. BEATTIE: 25, 46, 55-57, 59-61,  
66-68, 71, 73, 74, 77, 79, 81, 92-97, 105

1 JULY 8, 1997

9:15 A.M.

2 P R O C E E D I N G S

3  
4 MR. BARSS: We're running a little bit  
5 behind, but we'd like to start the meeting now if we  
6 could. I have a general announcement before we start.  
7 I'm Neil Barss from the Office of International Health  
8 Programs, and I actually wrote the notice on the draft  
9 on the availability of funds, which we're going to  
10 discuss this morning. And, basically, I want to say,  
11 just make sure everybody has signed in at the desk, if  
12 you have not already. Restroom locations are -- go  
13 back out the way you came. The women are to the left,  
14 and the men are to the right. So if anyone needs to do  
15 that you know where they are now.

16 During the meeting we will be using roving  
17 microphones, and there will be some people who will  
18 actually bring the microphone to you. So, please, just  
19 identify yourself if you want to make a statement or  
20 any comment at this meeting and use the microphone.  
21 The reason why we're using the microphone is because we  
22 are actually going to have an official transcript made  
23 of the meeting. And, basically, that transcript will  
24 be available after 10 days from the meeting. So  
25 anybody who wishes a copy of that, please contact me at

1 the place of contact that is given in the draft notice,  
2 if you don't know how to do that already. I would  
3 appreciate that.

4 When you -- because this is being  
5 transcribed, we would ask that you would identify  
6 yourself and spell your last name when you're using the  
7 roving mike so that our transcriptionist can get it  
8 down correctly.

9 There is an overhead projector available for  
10 anyone who has brought slides, for those who have  
11 requested to make a 5 minute statement or presentation.  
12 Due to the nature of the number of people that are  
13 attending, we can relax that 5 minute rule, but,  
14 probably, we don't want people speaking all day. so I  
15 think I'll leave this up to Dr. Seligman to be the  
16 judge when we must move on.

17 Now, with that, I would like to introduce  
18 Mr. Martin Domagala who is the Deputy Manager of the  
19 Operations Office, which is hosting us today; and he  
20 will welcome us and initiate the meeting.

21 Mr. Domagala?

22 MR. DOMAGALA: Good morning, and thank you,  
23 Neil. On behalf of, Jim Turner, our manager, I wanted  
24 to welcome all of our guests and members of the public  
25 to this special meeting that was driven by the Federal

1 Register notice on the Marshallese Medical Health Care  
2 Program. We do have some guests that appear to be  
3 arriving right now. So I'm going to stretch out my  
4 remarks a little bit so that, hopefully, they'll be  
5 able to catch some of the remarks, particularly those  
6 by Dr. Seligman, who will be following me shortly.

7 For those of you who may not know it, the  
8 Oakland Operations Office is one of 10 operations  
9 offices around the United States. And we have about  
10 1.8 billion dollars of federal funds that float through  
11 our organization, mainly through our national  
12 laboratories located here in the Bay Area. That's the  
13 Lawrence Berkeley National Laboratory, the Lawrence  
14 Livermore National Laboratory, and the Stanford Linear  
15 Accelerator Center. We also house here in our Oakland  
16 Office the Western Contract and Grant Center for the  
17 Agency, one of two primary grant centers for the  
18 agency. And we will be, in effect, letting the  
19 cooperative agreement that's behind the Federal  
20 Register notice. We have anywhere from 6 hundred to 8  
21 hundred grants that we issue every year out of our  
22 grant center. We administer about 16 hundred grants  
23 per year. We are very, very service oriented in our  
24 office. We're here to service two primary clients  
25 today. One of our clients is the ESH folks from our

1 colleagues in Washington, Environmental Safety and  
2 Health Organization, and our other client, I think,  
3 today is the Marshallese people, those from Rongelap  
4 and Utrik who are under the medical care program.

5 I understand that the Agency over the last  
6 couple of years has been making a more efficient --  
7 making a move toward more efficient services, medical  
8 services to the Marshallese Island people. I think  
9 that's great. I think under these tight budget times  
10 we have to stretch our dollars as far as possible. And  
11 I think there is a need here, whereby; the Marshallese  
12 as well as headquarters has realized we need to put  
13 more dollars into the medical care program and less  
14 into the logistical services to kind of stretch those  
15 dollars.

16 So on behalf of the Oakland Office, I would  
17 like to welcome you all here. We'll be here to service  
18 you all day today. We have people here who meet your  
19 needs. If you have to make any phone calls and so  
20 forth, please contact either Carol Werd or Lauren.

21 Again, welcome to you, and let me turn this  
22 over to Dr. Seligman.

23 DR. SELIGMAN: Thank you. On behalf of the  
24 Office of Health Studies and the Office of  
25 Environmental Safety and Health, I welcome you all to

1 this meeting. We'd like to thank the Oakland  
2 Operations Office for providing us a very nice meeting  
3 place and for hosting us today. Thank you very much.

4 I'd like to just take a quick moment to  
5 introduce some of the Department of Energy staff, my  
6 staff here today, so that you recognize them in the  
7 audience. And then we'll give Ambassador de Brum from  
8 the Marshall Islands an opportunity to make an opening  
9 statement.

10 Let me just start by first introducing the  
11 Director of the Office of International Health Studies,  
12 Frank Hawkins. Frank, you want to stand up? Sitting  
13 next to Frank is our field representative for that  
14 program, Bill Jackson, manager of the program. Also,  
15 in the back there is Dr. Michael Montopoli from our  
16 office; Tom Bell, who most of you should know; and from  
17 the office of General Counsel, Diana Clark. Then  
18 immediately to my left from our Office of Budgeting  
19 Administration, Dr. Updegrove. And also we have two  
20 individuals from the Oakland Operations office who will  
21 be working with us and handling the processing. And,  
22 oh, there's Neil Barss. I'm sorry, I didn't see you,  
23 Neil.

24 MR. BARSS: Thank you.

25 DR. SELIGMAN: He was making the opening

1        comments.    Then we have two individuals from the  
2        Oakland Operations Office, Joan McCrusky and Jerry  
3        Acock, who will be working closely with our office once  
4        the final selection is made, to insure that the  
5        procurement is handled appropriately and the financial  
6        arrangements in the program are handled expeditiously.

7                Before I make some opening remarks, I'd like  
8        to turn the floor over to Ambassador Banny de Brum from  
9        the Marshall Islands.    Banny, do you have something  
10       you'd like to say?

11                AMBASSADOR DE BRUM:    Can I give the floor  
12       first and then -- since you have the rules of this  
13       meeting?

14                DR. SELIGMAN:    Sure.

15                AMBASSADOR DE BRUM:    And then I'll call out  
16       in brief?

17                DR. SELIGMAN:    That's perfectly fine.

18                AMBASSADOR DE BRUM:    Thank you, sir.

19                DR. SELIGMAN:    Okay.    For anyone that didn't  
20       know, that's Ambassador de Brum who is the Marshall  
21       Island Ambassador to the United States.    And to the  
22       Ambassador's immediate left is Holly Barker.    And what  
23       is your official title?

24                MS. BARKER:    It depends on the day.

25                (Laughter)

1 DR. SELIGMAN: She is at the U.S. Embassy.  
2 Again, on behalf of my office, I would like to welcome  
3 you all and thank you for being here. In particular,  
4 I'd like to thank the senators and mayors and the  
5 citizens from both Rongelap and Utrik who are here.

6 In particular from Rongelap, I wanted to  
7 recognize Senator Riklon, who is here and Mayor  
8 Matayoshi. Thank you both for being here, and from  
9 Utrick, Senator Yamamura.

10 MR. YAMAMURA: We have a new mayor here.

11 DR. SELIGMAN: Mayor Joe Saul. He's back  
12 over there sitting next to Senator Riklon.

13 Thank you all for being here. Again, we look  
14 forward to your perspectives and input into this  
15 meeting. My opening comments are brief. As Neil  
16 pointed out, and I just want to repeat for those who  
17 have just arrived, the goal of this meeting is to hear  
18 comments and to answer any questions on the Draft  
19 Notice of Availability Funds that was published in the  
20 Federal Register. As you will note, on the stage we  
21 have a court transcriber who will be transcribing  
22 verbatim the proceedings of this meeting. So, please,  
23 use the microphone for any comments which you make, and  
24 also, identify yourself before you speak. We will be  
25 making that available to anyone who wishes a

1 transcription of this meeting within -- I guess, it's  
2 10 days following this meeting. So please let us know  
3 if you'd like such a transcription.

4 There have been four organizations that have  
5 requested an opportunity to make a statement at the  
6 beginning of this meeting. We will honor that request,  
7 at which point we will turn over and open up the floor.

8 You'll notice that the agenda calls for my  
9 making closing remarks at noon to 12:15. However, if  
10 there is need or desire to continue the discussion  
11 after lunch, we will be here starting again at 1:30,  
12 and we'll continue the discussion for as long as we  
13 need to today until we have answered all the questions  
14 and heard all the comments that wish to be made.

15 As most of you realize, the background of  
16 this program is well described within the Federal  
17 Register Notice. I don't need to go through that. The  
18 immediate genesis of this meeting and this announcement  
19 comes from a January 1997 meeting that occurred in a  
20 Majuro at which time the Foreign Minister for the  
21 Marshall Island, Phillip Muller, requested the  
22 Department of Energy put open a competitive bid for the  
23 medical program that the Department of Energy has been  
24 running to provide contracts to Brookhaven National Lab  
25 for close to 40 years.

1           We have, second to that process, established  
2           a working committee with the representatives of the  
3           peoples of the Marshall Islands to, basically, come up  
4           with what is prepared in the Federal Register, which  
5           is -- I want to emphasize again, a Draft Notice of  
6           Availability.

7           We do want to use this meeting to hear your  
8           comments, make any modifications, if any, changes that  
9           are necessary to that draft notice, in order that when  
10          the final notice is published sometime in August, that  
11          we, hopefully, get it right.

12          This is an important program for us. It's  
13          important that it be done well, and it's particularly  
14          important that the program be designed to serve the  
15          needs of individuals for whom we provide medical care,  
16          the peoples of Rongelap and Utrick, who have been  
17          designated eligible for this program. With that, I  
18          really have no other comments to make.

19          Ambassador de Brum, if you would like to make  
20          a statement now, you're welcome to do so. If not, we  
21          can carry on.

22          AMBASSADOR DE BRUM: Thank you, Paul  
23          Seligman, and the members of your foundation. Thank  
24          you for listening to our concern. The reason me and my  
25          government are pushing for change is because the

1 community, as we recently stated, they feel like they  
2 are not happy with the present program. We can do  
3 better in ways to move toward community peace. Here  
4 are our goals that will treat the Marshallese and  
5 improve our infrastructure. And this is a brief remark  
6 that I wanted to make. But I think the Rongese  
7 leaders might have something to say. Thank you,  
8 Dr. Paul.

9 DR. SELIGMAN: Thank you, Ambassador. Would  
10 any of the senators or mayors from either Rongelap or  
11 Utrick like to make a statement at this time? This is  
12 Mayor James Matayoshi.

13 MAYOR MATAYOSHI: Dr. Paul Seligman and  
14 members of the panel, first of all, I'd like to  
15 introduce one of our paramount chiefs who is present  
16 here today, Eroch Micacabuwa, who has taken an interest  
17 and wanted to observe this meeting and the kind of  
18 changes that affect our people; and Gordon Benjamin and  
19 our Attorney Howard Hills, who I may yield the floor to  
20 who wants to say something, comments on our behalf,  
21 which he can articulate what we have in mind.

22 Basically, like we have been pursuing for  
23 many years, the kind of changes that Ambassador de Brum  
24 was highlighting is what we stick by. And I'm looking  
25 at the agenda that reflects Brookhaven National

1 Laboratory as an interested party to it. And it kind  
2 of like puts us in question, because we thought  
3 Brookhaven National Laboratory wasn't going to be any  
4 party to it or the process of submitting the proposal  
5 for being the contractor as well as take care of the  
6 medical program in the Marshall Islands. Our goal is  
7 to make a change that will better the medical programs  
8 for the people that have been affected by the nuclear  
9 testing programs. Of those kind of changes, we expect  
10 these are the three people -- the parties that have  
11 shown interest like Mercy International and the other  
12 People, like Straub Clinics. And those are part of our  
13 concern that we would like to question also. But I'll  
14 yield the floor to Howard Hills who will reiterate some  
15 of our thoughts that we discussed earlier today. Thank  
16 you.

17 MR. HILLS: Thank you, Mayor.

18 We had a delegation meeting this morning, and  
19 everybody had an opportunity to express their views and  
20 ask questions. And as we walked over here, the Mayor  
21 informed me that the task of articulating a few of  
22 those viewpoints and questions would fall to me. And  
23 so, I undertake it willingly and gladly. I also want  
24 to recognize that left out of the introductions, **as** the  
25 Mayor just reiterated it, the presence of Eroch

1 Micacabuwa, I think is very significant, I think, along  
2 with Senator Riklon and the senators from Utrik and the  
3 mayors and members of councils and members of the  
4 community that are here. I think that their presence  
5 reflects the fact that they recognize that this is a  
6 very serious process, and it's being done very well by  
7 DOE. And I think there's a lot of appreciation for the  
8 fact that DOE is doing it well. It doesn't mean that  
9 from what I heard from the discussion this morning that  
10 they like everything that's in the Federal Register or  
11 they like everything that's been said or done in the  
12 process. But I think they recognize it as a  
13 conscientious, serious and sincere process, and that's  
14 why they've brought their paramount traditional leaders  
15 here and their elective leaders. And they're taking  
16 this very seriously and view it as something with a lot  
17 of importance.

18 I think that the main idea that was expressed  
19 this morning and represented a strong consensus view of  
20 everybody in the delegation. And if I misspeak and  
21 overstate it, please correct me. But I think the main  
22 idea that was expressed was that; one, they want  
23 Marshallese participation in the process to be real, to  
24 be substantive, to be material to the decision-making  
25 process. And they want that involvement to be on a

1 basis that they agree to and is a meaningful role for  
2 them in the process. And I think they're optimistic  
3 and hopeful and have every reason to expect that that  
4 will be the case.

5 I think the other thing, as the mayor was  
6 alluding to, I think there is a very strong feeling  
7 that a new program be one which is community-based,  
8 which is year round. Again -- and I'm identifying  
9 those as issues. I'm not staking out a position or  
10 trying to describe their position or how the end result  
11 would come out. But I'm saying those are issues and  
12 concerns that they have, that it be a program that  
13 begins a new era in their relationship with their  
14 medical providers and it be one that ends the legacy of  
15 the nuclear testing program and the medical care that  
16 was provided, basically, as an adjunct of the nuclear  
17 testing program and begin a new era and a new legacy  
18 that is based on trust and on confidence of the  
19 communities that they're receiving medical care based  
20 on their medical needs and that they're not be any  
21 other criterion for the medical care of an individual  
22 who receives it. And so the elements of confidence  
23 building and trust, and, specifically, that whoever is  
24 going to end up being the provider, be able to  
25 demonstrate the capabilities, the attitudes of the

1 methodology, the approach, the medical ethics that  
2 build trust and build confidence and establish trust.

3 And I guess that, parenthetically, you would  
4 have to add there that that's not the way that they  
5 feel about the medical program they have had in the  
6 past. They want the legacy of the Brookhaven Program  
7 and the abuses and the trauma and the cultural  
8 dislocation and the individual psychological and  
9 emotional burdens that have been borne by people in the  
10 community, that it be recognized that the legacy of the  
11 past is not a positive one. So they want to end that  
12 legacy and begin anew. And I think the last thing that  
13 I would say is that, in addition to the appreciation  
14 that everybody has for the job DOE and the process that  
15 DOE has created here which shows respect for the  
16 government of the Marshall Islands response to Minister  
17 Muller's request and the request of the RMI. As such,  
18 I think that the DOE is acting in a very responsible  
19 and credible way and should be commended in that  
20 regard. I think that we wanted to express that to each  
21 of the interested parties, to Mercy, Straub, to  
22 Mr. Hiner and Dr. Williams. And as the Mayor noted,  
23 they had, at one point in the process, been given the  
24 impression that Brookhaven would not be, but Brookhaven  
25 is here. But with respect to all of the interested

1 parties, I think we wanted to welcome them, express our  
2 appreciation for their interest. We look forward to  
3 getting to know them better. There was talk this  
4 morning about whether it would be appropriate to invite  
5 them to visit the Marshall Islands, in the case of  
6 Rongelap, perhaps go to Mejjatto and visit the community  
7 in Majuro and in Kwajalein. And the idea was expressed  
8 that if these interested parties were to pursue  
9 applications and pursue this project, that coming there  
10 and seeing the people and meeting the people and seeing  
11 the community where they live would not only give them  
12 additional information that they would need for  
13 preparing an application, but perhaps give them a sense  
14 of the moral as well as the medical dimensions of the  
15 mission. So those, Mayor, are my comments. I don't  
16 know, Senator Riklon, if there's anything you wanted to  
17 add. Or Ambassador de Brum, is there anything I  
18 missed?

19 AMBASSADOR DE BRUM: I don't think so.

20 MR. HILLS: Well, the Mayor wanted me to  
21 emphasize -- I was referring earlier to wanting the  
22 participation of the Marshallese parties to be  
23 meaningful and substantive. I think the Mayor wanted  
24 to note that the design of the selection panel and the  
25 membership of the selection panel and the composition

1 of the selection panel are issues which we want to be  
2 involved in and be participating in that as well.

3 Holly, does that accurately cover that?

4 MS. BARKER: Yes.

5 MR. HILLS: So, Mayor, does that cover the  
6 ground there?

7 DR. SELIGMAN: Any other comments from the  
8 Marshallese delegation? Hiroshi Yamamura, thank you  
9 for being here. We appreciate your presence.

10 SENATOR YAMAMURA: Thank you. When I  
11 listened to what the Mayor of Rongelap said and  
12 Ambassador de Brum along with Mr. Howard Hills, we just  
13 have three comments on our previous provider,  
14 Brookhaven. All we want is to have the people of Utrik  
15 be treated as a patient and not as a research client.  
16 So to elaborate more on the comments from our side, I  
17 will have to yield the floor to our new legal counsel,  
18 which we appointed by the Interglobal Government  
19 Council. His name John Masek, the former attorney  
20 general for RMI.

21 DR. SELIGMAN: Thank you senator. Can you  
22 state and spell your name again?

23 MR. MASEK: Yes. My name is John Masek,  
24 M-a-s-e-k.

25 We'd like to thank the DOE for putting this

1 program together and giving us a chance to speak on  
2 this matter. We have reviewed your RFP. Our new  
3 Mayor, Mr. Joe Saul, is here with us today. The areas  
4 that we find of importance are primarily focused on the  
5 relationship between provider and the patients  
6 themselves.

7 First of all, we find the area that is  
8 directly affected should be expanded to include those  
9 members into the community who lived on Utrik very  
10 shortly after the blast, as well as those who were  
11 present during the Bravo shot itself.

12 We have the term, "directly affected by  
13 radiation," those who were living in the area the  
14 months, the years afterward, were also directly  
15 impacted. Beyond that, we're hoping that the new  
16 provider will administer the program with a greater  
17 degree of flexibility and responsiveness in terms of  
18 the patients themselves. We feel both the well being  
19 of patients and the effectiveness of the program will  
20 be directly impacted on how well they are able to  
21 interact and understand the concerns of their patients.

22 We applaud the RFP where it puts greater  
23 emphasis on primary care and less on administration.  
24 The benefits of that should be self-relevant to  
25 everybody. It should deliver a better product for the

1 patients, and we're hoping with our new administration  
2 that we will be able to take a more active role in the  
3 program involving Utrik, and also a greater degree of  
4 responsibility in terms of delivering this program and  
5 others to the people.

6 And also, we were hoping to see greater  
7 coordination, cooperation with the 177 Health Care  
8 Program based in Majuro. As we see it, the 177 and  
9 these programs are, essentially, delivering a  
10 comparable service, that is, medical care for people  
11 affected by the nuclear testing program. And we're  
12 hoping any overlap or duplication can be eliminated.

13 And finally, we would just like to thank you  
14 again for the opportunity to make these comments and  
15 hope that the bidders will accommodate our concerns and  
16 interests when they make their presentations. And,  
17 finally, on the selection committee, the selection  
18 process, if Utrik as well as Rongelap could have a  
19 voice in that process, it would be most appreciated.  
20 Thank you, again.

21 DR. SELIGMAN: Thank you, very much. Any  
22 other comments or statements? I think what we'll do  
23 then is to move on to that portion of the program where  
24 we have the four groups that indicated an interest in  
25 making 5-minute statements. What I have done is taken

1 those and put them in a little box, and I'm going to  
2 randomly select.

3 Actually, Rick, why don't you do this? I  
4 have first Mr. Mark Hansen and Dr. Victor Williams.  
5 Are either Mr. Hansen or Dr. Williams here?

6 DR. WILLIAMS: Can I stand here and make my  
7 remarks?

8 DR. SELIGMAN: Wherever you like. Since this  
9 is being transcribed, it makes no difference.

10 DR. WILLIAMS: Good morning. I'm Dr. Victor  
11 Williams. I also have a Samoan name; I'm a chief in  
12 the Samoan community. My last name is Tofaeono.

13 DR. SELIGMAN: Could you spell that for the  
14 transcriber?

15 DR. WILLIAMS: T-o-f, as in Frank, a-e-o-n-o.  
16 It's a pleasure to be here. Thank you very much to the  
17 DOE for the invitation and also my respects to the  
18 various members of the Marshallese Territories and  
19 Republic. I was interested in this because I think  
20 that my experience in the Samoan medical field, medical  
21 care, has provided me with the experience to care for  
22 people of the Marshallese. Many of the problems that I  
23 have read about are some of the same problems that we  
24 have faced in Samoa. As you might know, Samoa is a  
25 territory of the United States. It's managed by the

1 Department of the Interior. It has very many of the  
2 same problems that come with funding programs and also  
3 trying to care for all the people in Samoa, in Samoa  
4 itself. And then, of course, a large part of the  
5 budget is the off-island care that they have to go  
6 through to get people to be treated properly.

7 Just a little bit about myself. I'm Samoan.  
8 I was trained in Samoa through high school, went to the  
9 United States for my bachelor's degree at the  
10 University of Illinois. And then I trained at Boston  
11 University School of Medicine and did five years of  
12 residency and internship in general surgery. I'm a  
13 general surgeon. I'm the president of the local  
14 chapter of the American College of Surgery in Nevada.  
15 I practice in Las Vegas, Nevada. I own one of the  
16 breast centers, three breast centers in Las Vegas. I  
17 own one of them and am directly involved in cancer care  
18 for women. I just wanted introduce my interest.

19 By being Samoan I feel that I can provide a  
20 great deal of health to the Marshallese and would know  
21 how to handle a program of this magnitude. Part of my  
22 program in the past 8 years has been taking the Nevada  
23 physicians -- we have a group of Nevada physicians that  
24 we call the American Samoan Medical Team that we take  
25 to Samoa each year for the past 8 years. We have about

1 8 to 10 members in the team of all different  
2 specialties, and we go and work in the Samoan community  
3 for about two weeks. This is all done gratis. The  
4 physicians that go are all my friends, and they  
5 volunteer readily to go.

6 So without further comments, I'd just like to  
7 say that I'm very deeply interested in this program. I  
8 think I can do credit to the program, and I think I  
9 know, as a Samoan chief, how the population of the  
10 Marshall Islands should be dealt with and should be  
11 treated. I think I know how their philosophy and their  
12 thinking goes.

13 Thank you, very much. I'll be glad to answer  
14 any questions anybody has.

15 DR. SELIGMAN: Dr. Williams, thank you for  
16 your statement. All right. Let's go on to the next  
17 statement. I have Mrs. Denise Kekuna. Kekuna?

18 MS. KEKUNA: Kekuna.

19 DR. SELIGMAN: From the Straub Medical  
20 Hospital.

21 MS. KEKUNA: Yes. I would like to do a  
22 little presentation. While he is adjusting that,  
23 Aloha. My name is Denise Kekuna. I'm with Straub  
24 Clinic and Hospital located in Honolulu, Hawaii. My  
25 position is liason for the Pacific Islands Medical

1 Services Department. I have been with Straub for over  
2 six years. I began in the administrative offices, and  
3 then in the last two years in the PIMS Department.

4 First of all, can everybody hear me?

5 THE REPORTER: I think the mike is a little  
6 low.

7 MS. KEKUNA: Can you hear? Or I need to  
8 yell? I did bring some reading material with me. I  
9 have two brochures depicting Straub's history and also  
10 details about our PIMS Department. They're located up  
11 at the front desk. For the next few minutes, I will be  
12 be reviewing Straub's history and present day services.  
13 Straub Clinic and Hospital is known as one of the  
14 oldest and largest private group medical practices in  
15 Hawaii with approximately 200 physicians, 1,800  
16 employees. We're a 159-bed hospital and have 11  
17 satellite clinics. Our goal is to provide the highest  
18 quality health care services in a compassionate, caring  
19 environment at a reasonable cost. Straub's  
20 responsiveness to the community creativity in  
21 developing new programs to address the needs of  
22 Hawaii's people has earned us a reputation as an  
23 innovative health care leader.

24 Although the majority of our patients are  
25 Hawaii residents, we routinely treat people from

1 Pacific Island countries and Asia, as well as visitors  
2 from all over the world. It started over 75 years ago  
3 when Dr. George F. Straub devoted his medical practice  
4 to a mission to bring together a group of doctors to  
5 provide the first medical care available. The  
6 physicians who joined him in this endeavor were the  
7 finest in the islands, each of them sharing  
8 Dr. Straub's conviction that the patient always comes  
9 first. Not long after, the clinic, as his practice was  
10 called, became the medical care provider of choice in  
11 Hawaii. For almost four generations the physicians and  
12 staff at Straub have clung to the course chartered by  
13 their visionary founder. As a result, Straub has  
14 become an internationally acclaimed medical facility  
15 and the largest integrated health care system based in  
16 Hawaii.

17 By 1932 there were 9 doctors and a staff of  
18 14. Today, Straub is proud to offer patients the most  
19 up-to-date procedures in nearly every field of medical  
20 practice. To name a few, cardiology, cardiovascular  
21 surgery, chest disease, endocrinology, geriatric  
22 medicine, infectious disease, neurology and  
23 neurosurgery, nuclear medicine, oncology and  
24 hematology, orthopedics and sports medicine  
25 rehabilitation, psychiatry and psychology,

1 rehabilitation therapy, surgery and vascular surgery.

2 In addition to general hospital care, Straub  
3 Hospital offers several specialty care programs such  
4 as: Anesthesiology, pain relief, burn unit, emergency  
5 services, intensive care unit, physical therapy,  
6 progressive care, rehabilitation therapy, social  
7 services, and discharge planning. The other services  
8 that we also provide are also available, not only to  
9 the patients, but our staff as well. And those are  
10 executive physicals, home health agency, international  
11 health care program, which also, our physicians and  
12 staff are fluent in other languages; Joslin Center for  
13 Diabetes at Straub; Ningen Dock Center, occupational  
14 health programs, outpatient treatment center for  
15 chemotherapy and transfusions, patient counseling,  
16 sleep disorders center, and Straub Pacific Health  
17 Foundation Research.

18 The Pacific Islands Medical Services began to  
19 formalize in the early 1980,s and was officially set up  
20 in 1986 under the direction of Dr. Henry Kressman. In  
21 the years that followed we have coordinated outpatient  
22 referrals and provided a Straub resource for Pacific  
23 Island patients, families and referral personnel.  
24 Along with our referral care service, we have  
25 specialized in our history in a rotating physicians

1 program, which has provided consulting services to  
2 American Samoa, Saipan, and Guam. To be specific,  
3 these are with whom we have formalized relationships  
4 with in the Pacific: L.B.J. Tropical Medical Center in  
5 American Samoa; Government Group Home, Commonwealth  
6 Health Center and Medical Offices of the Marshall  
7 Islands Program; Federated States of Micronesia  
8 National Health Providers Health Insurance Plan; Guam  
9 Department of Health and Human Services; Marshall  
10 Islands Social Security Administration; MIT Kwajalein  
11 and Multi-cover and State Wide Insurance plans located  
12 in Guam and in Saipan.

13 For your perusal there are two commemorative  
14 books that we have published, copies of books that we  
15 published in 1996 celebrating our 75 years of  
16 existence. This is one, the other is located up front.  
17 You are welcome to look at them, and if you want any  
18 copies for yourself, please let me know.

19 Thank you for your time. Aloha.

20 DR. SELIGMAN: Thank you very much,  
21 Mrs. Kekuna. The next speaker is Mr. Gregory Beattie  
22 from Mercy International.

23 MR. BEATTIE: Yokwe, (Hello in Marshallese)  
24 and good morning, everyone. I want to welcome members  
25 and representatives from the Republic of the Marshall

1 Islands, also to the Department of Energy. I want to  
2 thank you for giving us the opportunity to look at this  
3 RFP and consider the challenge of this health care  
4 delivery program.

5 Before I get started, I'd like to introduce  
6 two people from my staff, Mr. Allen Hutchinson, please  
7 stand up Allen. He is our Assistant Administrator of  
8 Chief Financial Office. Many of you know him. He's  
9 been in Majuro for two years with us now with the 177  
10 Program. I'd also like to introduce another member of  
11 my staff, Redwin Lewis is a Business Development  
12 Specialist, and he's headquartered in Farmington Hills,  
13 Michigan.

14 This morning I'd like to do a couple of  
15 things, one is to give you an overview of Mercy as an  
16 organization and also tell you about our perspective  
17 and emphasize why we're unique and we think we're up to  
18 the challenge of this health care delivery program.

19 Mercy Health Services is actually one of the  
20 top ten health care delivery organizations in the  
21 United States. We have revenues of in excess of \$2  
22 billion dollars a year. The main core of that  
23 organization is a hospital system called Mercy Health  
24 Services, but in addition to the hospital system we  
25 have other organizations that support that hospital

1 system. We have Amicare Home Health Care, which is a  
2 company that specializes in delivering health care in  
3 the home setting. We have Harry Lidervelt and  
4 Associates, which is a physical therapy company. They  
5 do speech therapy, occupational therapy and rehab  
6 therapy. Mercy Alternative, which is also Mercy Health  
7 Plan, is a financing arm of our organization, and it's  
8 unlike an indemnity type of an insurance plan. It's a  
9 managed health care plan, an HMO, a health maintenance  
10 organization and a preferred provider organization. We  
11 also have a foundation that raises funds for worthy  
12 causes. We have an information systems division that  
13 specializes in computer applications for health care.

14 Mercy International is a subsidiary of the  
15 organization that does programs exclusively outside of  
16 the United States. And we have been working in the  
17 Marshall Islands since 1985, actually started assisting  
18 the government when the Ministry of Health transitioned  
19 the old Amerishoda Hospital to the new facility back in  
20 1985. Mercy Services for the aging is our division  
21 that does nursing home type care. We have  
22 approximately 20 skilled nursing facilities in Michigan  
23 and Iowa. The Sisters of Mercy Health Care Corporation  
24 is the formal name of the hospital system and Benski  
25 Insurance Company is a medical malpractice insurance

1 company.

2 This is just sort of an organizational  
3 structure. We are in the states of Michigan, Iowa,  
4 Indiana, New York. Also, in addition, we have  
5 relationships with a hospital that we're managing in  
6 Nebraska.

7 In the United States our health care delivery  
8 system faces many of the challenges that we face in the  
9 Marshall Islands, and Mercy as an organization is  
10 moving toward a community health care system model.  
11 And we see that because in United States we've got to  
12 move our health care delivery from fragmentation to  
13 continuity, much like we see in the Marshall Islands.

14 We see separate health care delivery programs  
15 from the Ministry of Health, from the 177, from DOE,  
16 and it is fragmented. There is an overemphasis on  
17 acute care, and we've mentioned that this morning.  
18 Someone said we're glad to see a more focused effort on  
19 primary health care services. In addition, we've got  
20 to take a look at comprehensiveness of service and  
21 really getting into the community and talking about the  
22 population becoming responsible for their care.

23 I think we can do a better job. We can do a  
24 better job of teaching individuals about health care,  
25 about lifestyle issues, and things that will make them

1 healthier. Moving from cost uncertainty to cost  
2 predicability is a real issue that we face; also, in  
3 the United States, diffused accountability to focused  
4 accountability. I think that has an application in the  
5 Marshall Islands as well.

6 Again, three different health care programs,  
7 diffuse accountability. I think if we can integrate  
8 programs, I think we can focus on the accountability  
9 for health care services. There's a lot of integration  
10 challenges that we face. We do have waste and  
11 duplication because of different services. You know,  
12 coordination of tertiary care in Honolulu is one.  
13 We've identified that. That's been an ongoing issue.

14 If we can unify DOE's program, 177's Program,  
15 and coordinate that service in Honolulu, I think that  
16 we can improve the quality and we can reduce the cost.  
17 Mercy is committed to leading the evolution of health  
18 care in local communities through its health care  
19 ministry. We're sponsored by the Religious Sisters of  
20 Mercy Regional Community of Detroit. The sisters are  
21 very committed to serving persons that are economically  
22 and socially disadvantaged, and take it very seriously.

23 Our organization is largely nonprofit. That  
24 is, we don't have to bring in revenue to satisfy  
25 shareholders. Our revenues have got to be greater than

1 our expenses in order for us to continue the  
2 organization, but we don't have shareholders to  
3 satisfy. So we don't have a profit motive. The  
4 motives of the Sisters of Mercy are more service  
5 oriented.

6 I think we have a challenge to organize a  
7 community health care delivery system in the Marshall  
8 Islands, and I think that Mercy is uniquely suited to  
9 take what we know about health care delivery in the  
10 United States and help transfer that knowledge to the  
11 Marshall Islands. I think that in the 10 years that we  
12 have spent working with the Marshallese, I think we  
13 have a lot of success stories that we can point to.

14 A few comments about Mercy International. We  
15 have been providing management training and development  
16 services, supplies, other things, to many points around  
17 the world. This is a graphic representation of where  
18 we've been. You can see that our experience has been  
19 significant in Micronesia. We have done health care  
20 improvement projects in Guam, the Northern Mariana  
21 Islands, the Republic of Palau, American Samoa. We've  
22 also worked in Australia, New Zealand, Papua New  
23 Guinea, and in the Pacific. You can see we also have  
24 experience in Europe and Africa and South America.

25 A little bit about our perspective. We want

1 to serve as an enabler, as a teacher and a training  
2 organization to assist local health personnel to  
3 develop and improve their own programs. The health  
4 care program that I hope that we can deliver in the  
5 Marshall Islands is one that builds partnership with  
6 the various constituencies, the local community, the  
7 local Ministry of Health, the Department of Energy and  
8 the contractor.

9 I hope that we can build infrastructure and  
10 train Marshallese to render the program in the future.  
11 Mercy International regards human capital -- that is,  
12 the composite of intellect, ingenuity, technical skills  
13 and dedication -- as important to successful deliveries  
14 and is a tangible capital and we take that very  
15 seriously. We can't do it without the people. Mercy  
16 International believes training and technical  
17 assistance must be tailored to meet the needs,  
18 resources and belief structures of each culture.

19 We know that there are uniquenesses about the  
20 Marshall Islands that have to be considered, that have  
21 to be taken into consideration in designing and  
22 delivering a health care program.

23 Just a quick summary of Mercy International.  
24 There has been over a hundred short-and-long-term  
25 projects. Short-term projects meaning a month or less.

1 Longer term generally is a year. We have over 200  
2 Mercy health services staff that have been utilized.  
3 There are about 25,000 employees in the Mercy  
4 organization. And through Mercy International, we  
5 solicit volunteers to send to foreign countries. These  
6 persons can range from doctors and nurses to medical  
7 records specialists, to computer specialists.

8 We had a number of those volunteers to serve  
9 the Marshall Islands. We had had a person from Mercy  
10 Information Systems, a computer expert, a microcomputer  
11 expert, develop a computer database for the 177 Program  
12 that has helped us immensely to automate our records  
13 system for the 11,000 people we're caring for in the  
14 177 Program. Last summer we had an ENT surgeon  
15 volunteer to go to the Marshall Islands. And this  
16 particular physician did 25 thyroid surgeries. And  
17 again, it's on a volunteer basis. We identify  
18 opportunities in a particular location, we communicate  
19 that within our organization, and as volunteers come  
20 forward, we have them serve at that particular  
21 location.

22 Just a quick summary, key qualities of  
23 service. Again, we want to enable, teach, train,  
24 assist personnel to develop and improve their own  
25 programs. We want to make appropriate resources of

1 Mercy, the entire organization and its subsidiaries  
2 available to health care providers and sponsors in both  
3 developing and developed nations of the world. We look  
4 to provide short-term services including training in  
5 specialized studies. We have hosted foreign and  
6 nationals at our hospitals. We have trained persons in  
7 a variety of different capacities, from operating room  
8 technicians, to radiology techs, to persons that  
9 operate mammography services. We've had physicians  
10 that come for specialized training to our hospital  
11 facilities, just to name a few.

12 We also want to work with others who hold  
13 common values. I think everyone in this room is  
14 interested in a better health care delivery program.  
15 And we want to work with you all to make it better,  
16 because we can make it better.

17 I want to thank you all, and I look forward  
18 to the discussion and the questions. Thank you.

19 DR. SELIGMAN: Thank you, Mr. Beattie.

20 Dr. Vaswani?

21 DR. VASWANI: I am Dr. Vaswani from  
22 Brookhaven National lab, V-a-s-w-a-n-i. What I'd like  
23 to do is first of all thank the DOE for giving me the  
24 opportunity to come here. And I'd like to also thank  
25 in advance the esteemed people of the Marshall Islands

1 for listening to me.

2 First of all, I'd like to clarify a couple of  
3 things. The first thing I would like to do is to say  
4 that I am representing Brookhaven National Laboratory  
5 today because the Brookhaven National Lab people  
6 themselves were unable to come.

7 As you know, they are going through many  
8 changes themselves, and their entire leadership is  
9 actually looking for bids out in New York right now.  
10 So none of the members of the medical department could  
11 come today to accompany me here to wish you folks the  
12 best and also to talk about themselves. So for the  
13 moment, all I'm going to say is that I represent  
14 Brookhaven National Labs of the past, and for the  
15 future I'm going to be representing myself as an  
16 independent person who has participated in the Marshall  
17 Islands programs for many years.

18 So I'd like to give you a little bit of  
19 background about myself. I guess the Marshall Islands  
20 program has been going on for more than 40 years. And  
21 for about 7 years of the past I've volunteered as a  
22 physician to participate in the program, just to go  
23 there and help out with the routine things you've been  
24 hearing about here. I'm interested in the program as  
25 such. I'm interested in the humanity and the people

1 who are there. I'd like to help them out as a  
2 physician to take care of their basic needs that are  
3 arising. And, essentially, that was the kind of goal  
4 that we set out at Brookhaven to make the changes that  
5 were necessary to make this work.

6 So continuing that same theme, what I would  
7 add also is that the program that the Marshallese know  
8 about, the Brookhaven Program, actually does not exist  
9 any more, because there have been tremendous changes  
10 that the people at Brookhaven have authorized me to  
11 make, which have made the program completely different.

12 So I'd like to make that point very clear to  
13 all the members of the Marshallese that are here that,  
14 yes, you folks may have had some concerns about the  
15 Brookhaven Program, but the program as you knew it is  
16 really no longer in existence because of the major  
17 change in the emphasis.

18 And as of October 1st, or whatever the  
19 remainder of this next year is, I will be, basically,  
20 taking charge of the medical admissions that will be  
21 ongoing on the Marshall Islands.

22 So that's the basic first step that you would  
23 need to know. So that itself is a very dramatic change  
24 of the Brookhaven National Lab people. And,  
25 essentially, they have given me the charge to make

1 whatever changes would be necessary to make this whole  
2 process soon and agreeable to all the parties  
3 themselves.

4 So that's basically how I would represent  
5 Brookhaven, from that standpoint.

6 Coming back to myself, I'm a physician; I'm  
7 an endocrinologist; I've been in practice for 19 years.  
8 I have trained in Kenya, originally, so I'm very  
9 familiar with the tropical diseases and all of the  
10 problems that arise in those countries. I also come  
11 from a "minority population," quote, unquote, so I'm  
12 very sensitive to the needs and the cultural  
13 sensitivity involved in different populations that we  
14 deal with. So in that sense, I would also represent  
15 the physician from Samoa who has also had the expertise  
16 that is necessary for all of the caring that we need to  
17 provide the patients.

18 So, essentially, I'm just going to make my  
19 comments very brief, that I'm going to actually be  
20 looking at this program as an independent. It is true  
21 we were listed as Brookhaven National Laboratory, but  
22 that was just to represent the Brookhaven National Lab  
23 as a person who has been with the program in the past  
24 but is basically going to make changes for the future.  
25 And I'd be happy to start with that.

1 Thank you very much.

2 DR. SELIGMAN: Thank you very much. We are  
3 now at the part of the program we're we have,  
4 basically, questions for the Department of Energy  
5 panel. I'd like to suggest if you don't mind, Neil,  
6 would it be possible to take a 10 minute break?

7 MR. BARSS: Yes.

8 DR. SELIGMAN: Dr. Williams?

9 DR. WILLIAMS: I was very remiss in not  
10 introducing my cohort here, Mark Hansen, who has worked  
11 extensively with the Raytheon Program when they were in  
12 the Marshall Territory. Thank you.

13 DR. SELIGMAN: Let's go ahead and take a 10  
14 minute break and reconvene at -- what time do you have?  
15 Let's reconvene at 10:30. Thank you.

16 (Whereupon, a short recess was taken.)

17 DR. SELIGMAN: All right. Let's get started.  
18 Before we move on to the question and comment period, I  
19 wanted to turn the mike over to Rick Updegrove for a  
20 comment and point of clarification.

21 MR. UPDEGROVE: I just wanted to briefly go  
22 over -- we've had some presentations, but understand,  
23 the process we're going to go through is the standard  
24 governmental financial systems process. And we're  
25 going to take the applications, and then we'll do an

1 independent panel, peer review. And we'll make the  
2 awards off of that.

3 So I didn't want you to think that the  
4 presentations today were the final piece of this.  
5 We'll get the applications in, and NIH will do the peer  
6 review, and that's how you end up with an award.

7 DR. SELIGMAN: Is that clear? Presentations  
8 today have nothing to do with the final award. The  
9 final award will be based on written submissions and  
10 not on the quality of the presentations today.

11 Could you use the microphone?

12 THE REPORTER: Name, please?

13 MR. HILLS: Howard Hills, counsel for  
14 Rongelap. The clarification is appreciated and is  
15 consistent with everybody's understanding, but the  
16 clarification raised more questions than the prior  
17 condition. I mean, I don't think anybody thought that  
18 today's presentations were final or were the basis. I  
19 thought this was more of a everybody getting to know  
20 each other and establishing notification, getting  
21 interested parties identified and all of that. I think  
22 everybody is very comfortable with that and happy with  
23 that.

24 But the description of the process whereby a  
25 final decision will be made, I think, I would say this:

1 We assume that when you say that there will be  
2 applications, and there will be an NIH peer review and  
3 then final decisions will be made on that basis, that  
4 includes a process that involves a selection committee  
5 and the involvement and participation of the  
6 Marshallese and everything. But it sounded kind of  
7 like, well, this has been nice, but we'll get the  
8 applications from the interested parties and do an NIH  
9 peer review, and then we'll make the awards on that  
10 basis. That's all that was said.

11 This is just to make sure or to confirm that  
12 that process is one which involves not just those  
13 elements, but the process, whereby there would be a  
14 selection committee, and we would be talking about what  
15 the composition of the selection committee is and all  
16 of that. Then there would be, as described in the  
17 congressional record, the participation of the  
18 Marshallese.

19 DR. SELIGMAN: Yes, your understanding is  
20 correct. I just signed a letter, and if the Ambassador  
21 hasn't received it yet he should be receiving it  
22 shortly, asking for the government of the Marshall  
23 Islands to provide at least one name of an individual  
24 or individuals to the NIH to serve as part of the  
25 selection team. So we will handle that through our

1 embassy, but I want the communities of both Utrik and  
2 Rongelap to be aware of that to coordinate that list.

3 AMBASSADOR DE BRUM: How many will be on the  
4 selection committee? How many members?

5 DR. SELIGMAN: The size and composition of  
6 the selection committee hasn't been determined yet. NIH  
7 will make that determination independent of the  
8 Department of Energy and will use a number of criteria.  
9 One is, of course, the number of applications that are  
10 received. And so they clearly need a committee of  
11 suitable size to handle the applications.

12 Also they look at the kinds of expertise and  
13 the breath of expertise and representation, at least,  
14 to be on the committee. That's a determination of the  
15 folks that NIH will make, and I actually would suggest  
16 and recommended that you write that question directly  
17 to Dr. Paul Strudler who will be handling that.

18 There is no limit on the number of people who  
19 can participate on that committee, but that's a  
20 determination that he will make.

21 AMBASSADOR DE BRUM: Will they compare  
22 knowledge, or will they just acknowledge the expertise?  
23 Can there be three at once?

24 DR. SELIGMAN: You should put that question  
25 to Dr. Strudler. In my letter to you I said at least

1 one. If you make the case with Dr. Strudler that it's  
2 important to have not only representatives from Utrik  
3 and Rongelap but also from Washington staff, I think  
4 you should take up with him and make that case with  
5 him.

6 Were there any other comments or questions?

7 AMBASSADOR DE BRUM: I had a few comments, a  
8 few questions, but I wanted to turn the floor to  
9 Rongelap and Utrik. I have a couple more questions  
10 that I wanted to raise.

11 DR. SELIGMAN: All right. Would you like to  
12 begin?

13 AMBASSADOR DE BRUM: Maybe I will start with  
14 Rongelap and Utrik. This question is entirely to  
15 Brookhaven. Please explain the changes to the program  
16 that you mentioned. You've talked about the changes.  
17 I don't know what kind of changes you're referring to.

18 You want to take that question first?

19 DR. SELIGMAN: Dr. Vaswani?

20 DR. VASWANI: The changes we're proposing,  
21 immediately, are basically a structural change. As you  
22 know, it goes out twice a year to the Marshall Islands  
23 for their health care there. That part won't change.  
24 We're not going to change that part. We'll be going  
25 through a structural change.

1           As you know, Dr. Howard was in charge of the  
2 program and will remain so until the end of September.  
3 But as of October 1st, I'll be in charge of the  
4 program, the medical part, the contacts between the  
5 physician and the 177 and all of normal routine  
6 processes. So, essentially, that is one change that we  
7 are going to do.

8           The second change I would add is that  
9 everybody at Brookhaven is very familiar that this is  
10 going out to bid, so they have been notified that there  
11 may be changes in the personnel also. So other  
12 personnel will also be involved in the changes.

13           So, basically, the initial changes that I was  
14 charged with was, basically, to make whatever changes  
15 would be necessary to get the program continuing in the  
16 same sense of continuity, but at the same time,  
17 structurally different so that there will be no  
18 question that there has been a change made.

19           So that's the first one. Does that answer  
20 the question? Did you want me to elaborate more,  
21 Ambassador?

22           AMBASSADOR DE BRUM: Thank you, very much.  
23 Maybe later I may have more questions. I have just my  
24 final question which is directed to the DOE. Can you  
25 explain how or if money can be sifted from Bechtel who

1 has contracted with the medical contract? Thank you.

2 DR. SELIGMAN: Well, if you look in the  
3 Federal Register Notice, under the section entitled,  
4 "Logistical and Administrative Support,, ' we talk about  
5 establishing and maintaining a working programmatic  
6 relationship with Bechtel, Nevada, "which not only,"  
7 I'm quoting now, "which not only currently provides the  
8 logistic needs of the medical program, but also DOE's  
9 radiological and environmental monitoring programs/  
10 Elsewhere in this announcement we do talk about the  
11 fact that applicants may propose replacement services  
12 for them. Now, I'm talking about the section entitled  
13 "General Program Requirements."

14 MR. HILLS: Doctor, can you tell us what page  
15 you're reading from?

16 DR. SELIGMAN: Yes, it's page 29126. It's  
17 the third column entitled "Program Requirements,  
18 General," Section A, subparagraph E. And it says, "Use  
19 current DOE contractor support," and it lists them, "or  
20 propose a replacement for the services provided by  
21 these contractors." And in Appendices C, D, and E, it  
22 lists the services that are currently provided. Then  
23 we note, "Applications that propose replacement  
24 services should emphasize more dollars being spent for  
25 medical care rather than logistic support, but may

1 provide a cost estimate that exceeds \$1.1 million  
2 annually.,'

3 So what we've done, Mr. Ambassador,  
4 essentially, is in that paragraph given the applicant  
5 an opportunity to either use the existing contractor's  
6 support that we have through Bechtel or to propose  
7 using an alternative or replacement. As far as that  
8 goes, we provide essentially no other concrete  
9 direction in this statement of work.

10 AMBASSADOR DE BRUM: Thank you, Dr. Seligman.  
11 Let's say that \$1.1 million dollars is exhausted and we  
12 have spent it all. Let's **say** we need more money to run  
13 this program. Can you borrow money from Bechtel and  
14 sift it through that particular program? I guess  
15 that's my question. Can you sift money from Bechtel in  
16 the event that the funding already completely gone?

17 You know, let's **say** there's a problem,  
18 because you cannot predict as you run this program your  
19 medical overflow.

20 DR. SELIGMAN: That's a good question. You  
21 want to handle that one?

22 MR. UPDEGROVE: What we're hoping to do in  
23 the final formal Federal Register Notice is to have  
24 applicants structure their applications to have a  
25 program that's \$1.1 million dollars, and to structure

1 anything beyond that as what you want to call an  
2 alternate proposal. In other words, we currently have  
3 a \$1.1 million dollar budget which is what we know we  
4 can award with.

5 If you have other ideas on how you can do  
6 logistics, it should be presented as an alternate  
7 proposal. Then we're going to have to take a look to  
8 see what we have with the Bechtel contracting. Phil  
9 Jackson and Tom Bell are a little more familiar with  
10 the requirements of that. Tom?

11 MR. BELL: Tom Bell, Department of Energy,  
12 Unit 63. I think in regards to the balance in the  
13 budget, what we have to look at is if the bidders are  
14 creative in providing more community service in place.  
15 Some of the logistics costs that we experience in  
16 transporting patients, per diem costs, airfare, costs  
17 to go to Honolulu, perhaps might not be needed as much.  
18 And, therefore, more dollars might go into community  
19 medicine and less into some of the transport costs we  
20 are experiencing. The balance of how the bidders will  
21 look at that, the kinds of things they think they can  
22 do to provide more of that care locally and to  
23 eliminate some of the costs needed to transport  
24 patients to locations away from their known location in  
25 the Atolls or Majuro or Kwajalein will have impact on

1 how much dollars need to be spent on the logistics part  
2 of it.

3 So the challenge, I think, to the bidders  
4 here today is to think about how to do that, how to put  
5 in place things locally that prevent some of the  
6 logistics that's necessary now to get patients to  
7 tertiary care, especially, and some of our patients far  
8 away.

9 DR. SELIGMAN: Tom's point is well taken and  
10 correct, and it does answer your question. The bottom  
11 line is that there is some flexibility in terms of how  
12 the funds are used.

13 MR. BEATTIE: Greg Beattie. Yes, I have a  
14 question on the logistics budget as it exists  
15 currently. What is that figure in the event that we  
16 consider some creative proposal other than Bechtel? We  
17 would like to know the total dollars being spent on  
18 logistics now.

19 DR. SELIGMAN: Tom, what is the number for  
20 our total logistics budget?

21 MR. BELL: Currently, we're spending on the  
22 medical portion of the program -- of course, logistics  
23 takes care of the environmental as well as it does the  
24 assessment portions -- but about \$1.3 million dollars a  
25 year is spent on the actual transportation of patients

1 and getting all the physicians from the United States  
2 to locations to all the supplies and other things that  
3 are needed. And Bechtel is providing all of that  
4 structure to get folks and supplies and doctors and the  
5 transportation. And that includes the LCU-2000 at  
6 Kwajalein which is an important element in getting  
7 patients down from Mejatto to Kwajalein.

8 All of those things are part of the logistics  
9 that's necessary to get patients to the center where  
10 we're now providing the medical care.

11 DR. SELIGMAN: Tom, the answer is \$1.3  
12 million in logistics for the medical program?

13 MR. BELL: That is correct.

14 DR. SELIGMAN: What about our total logistics  
15 budget for medical environment?

16 MR. BELL: It's about \$2.4 million for the  
17 entire program, logistics program with Bechtel.

18 DR. SELIGMAN: So you spend \$2.4 million that  
19 basically supports our environmental mission, or DOE's  
20 assessment mission and our medical of which  
21 approximately half goes to the logistics part?

22 MR. BELL: Right.

23 MR. JACKSON: This is Bill Jackson,  
24 Department of Energy staff, 863 Honolulu. I'm involved  
25 with this operation out in the Pacific. Also included

1 here is all the support that's directed to the patient  
2 in terms of per diems paid to Majuro, Honolulu,  
3 Kwajalein, all the patients that are brought in, and  
4 they're significant. They add up to a significant  
5 amount of the budget that goes directly to the people  
6 for per diem, as well as the total cost to Kwajalein  
7 and other locations, Majuro, Honolulu, and the LCU  
8 going back there, all the airplane fares with AMI.

9 There are several people in Honolulu eating  
10 up the money. It goes out to the field to the pockets  
11 of the people involved in the program. Thank you.

12 MR. HILLS: Howard Hills, for the record. I  
13 guess I wanted to ask a couple of questions about  
14 process because rather than jumping to, you know, sort  
15 of the terms of proposals at this stage, to talk a  
16 little bit about the process that can lead to that.

17 First of all, if I'm Mercy or Straub or  
18 Brookhaven or Dr. Williams, what I seem to be hearing  
19 right now is that, well, you're to have to do an  
20 application that would be based on the idea of \$1.1  
21 million dollar medical program, but you have the option  
22 of also proposing as an alternative, perhaps, a program  
23 designed a little bit differently with a different  
24 budget based on the possibility of a different  
25 allocation of different available resources. These

1 would be the Bechtel, current Bechtel contract, the  
2 logistics one.

3           So if I am one of the interested parties and  
4 I want to develop my application, who should I be  
5 talking to, to get information to develop the  
6 alternative application? Would it be Tom Bell, would  
7 it be Mr. Jackson, would it be you? I just want to  
8 **make** sure, for example, Denise goes back and talks to  
9 -- I'm sure that the Mercy people know who to talk to,  
10 but I would like to make sure that all interested  
11 parties are aware; one, of the alternative of proposal  
12 concepts and; two, who they should talk to get the kind  
13 of information that they would need to develop  
14 alternative proposals.

15           DR. SELIGMAN: A couple of things. One is  
16 that we provided in the Federal Register Notice in the  
17 appendices a description of Appendix C of the Bechtel,  
18 Nevada medical support capabilities, medical support  
19 that's provided currently by Straub, and medical  
20 services provided by the U.S. Army at Kwajalein along  
21 with demographic information.

22           Our hope was that the Register Notice would  
23 contain all the information that was necessary, because  
24 it's the only public document that exists at present  
25 that fully describes not only the current program, but

1 all the support and logistic activities that go on in  
2 concert with this program.

3 One of the purposes of having this open  
4 meeting today is that if, indeed, there is information  
5 here which is not clear enough or not sufficient enough  
6 for applicants to appropriately respond to this notice,  
7 then we'd like to hear from them. That's why we,  
8 essentially, invited potential bidders today, because  
9 we'd like to hear how it's reviewed by the potential  
10 bidders so that that information can be included in the  
11 final Federal Register Notice.

12 MR. HILLS: Thank you very much. That is  
13 exactly why I just wanted to satisfy myself that all  
14 the interested parties were aware of who the players  
15 are and who they would call on the phone to ask  
16 questions and obtain information, whatever is available  
17 to interested parties in terms of the budgeting  
18 information and data about the program.

19 DR. SELIGMAN: The contact -- Neil, is your  
20 name listed here?

21 MR. BARSS: Yes.

22 DR. SELIGMAN: Neil Barss is, essentially,  
23 our contact person. So folks shouldn't be calling Tom  
24 Bell or Frank Hawkins or myself or Bill Jackson.

25 MR. HILLS: Well, would you be willing to

1 give everybody your home phone number?

2 DR. SELIGMAN: I'm listed. But I should  
3 point out that the kind of information that we can  
4 provide over the phone will be fairly limited,  
5 essentially, only to probably just how many folks have  
6 applied and how to get an application.

7 Again, we are very sensitive about giving out  
8 information over the telephone that's, essentially, not  
9 contained in this Federal Register Notice. Because we  
10 feel it's very important to the integrity of the  
11 procurement process that every potential bidder have  
12 the same information.

13 Again, the purpose of this public meeting  
14 was, again, if there are things that are missing here  
15 or things that need to be clarified, additional  
16 information that needs to be part of this request; this  
17 is the opportunity to let us know about that so that  
18 when we do go out with the final notice that  
19 information is incorporated. That will be,  
20 essentially, our final statement on this program.

21 And you'll have Neil's phone number, but I  
22 don't think he'll be answering the phone so much. I  
23 don't mean that. He'll be answering the phone, but as  
24 I said, the amount of information that he can provide  
25 will be strictly limited by our procurement

1 departments. Yes?

2 MR. BENJAMIN: I'm Gordon Benjamin, I work  
3 with Rongelap local government. Paul, can the  
4 potential bidders take that number, \$1.3 million, that  
5 is the logistic number for Bechtel, for the medical  
6 side of it, can they use that number \$1.3 million, add  
7 it to \$1.1 million that is currently in the program and  
8 come up with that alternative? See, this is logistics  
9 and this is the medical provision as we would propose  
10 in the alternative. And then make a presentation from  
11 that, as opposed to saying; okay, this is \$1.3 Bechtel,  
12 and they'll just bid on the \$1.1 side. Can they just  
13 come up with a total different proposal based on the  
14 \$1.1, plus the \$1.3 added for a total package?

15 DR. SELIGMAN: Let me turn this over to the  
16 staff. My initial reaction is I don't see why not.

17 Tom, do you the want to do that?

18 MR. BELL: That's basically what I think they  
19 would have to do if they wanted to propose a total  
20 package where they felt they made all of the logistics.  
21 I might add, the continuity provided in the cost  
22 savings of the running of the two programs,  
23 simultaneously, with Bechtel has some impact. And if  
24 we were to rip out the entire program for medical  
25 logistics, it may impact their ability to do the

1 environmental assessment site because there are  
2 commonalties with the logistics people in Honolulu and  
3 in other areas that make it possible to do all these  
4 three programs together.

5 So we would have to look at the total,  
6 carefully, in terms of the impact it has on our ability  
7 to run the entire program for the Marshalls within the  
8 other parts of it. And to say that the whole \$1.3  
9 could be spent and reallocated in an entirely different  
10 way could impact some of the other aspects of the  
11 program. We have to analyze that to see what that  
12 would be.

13 But there are many things that Bechtel does  
14 that are parts, as Bill had mentioned, in terms of  
15 incorporating monies to the peoples that are being  
16 serviced. And I think if it's not fully understood, a  
17 large share of money that goes for per diem and for  
18 hotels and for transport, if the bidders were to  
19 allocate it differently and then they might find that  
20 they're not able to get the patients taken care of the  
21 way it's currently done.

22 So we have to consider the second step very  
23 carefully as to whether it's going to improve the  
24 program or it's going to create so much difference in  
25 the approach it might actually hurt the current effort

1     **as we** do it.     So the option is there because we want to  
2     give the bidders the creativity in looking at if they  
3     could do it better.     Certainly they could suggest  
4     something.

5             That's why we like to have it in two pieces  
6     so that we know what the basic \$1.1 million would be  
7     spent for.     And then if they have created one that  
8     they'd like to try to tackle the other part of it, I  
9     think it's a picture of how that might work.     So we can  
10    analyze the effect that would have on the budget.

11            DR. SELIGMAN:     Let me just say -- by the way,  
12    I think that unless you have an objection, in our final  
13    notice we should at least indicate, since we stated so  
14    on the record in this meeting, the amount of money that  
15    we currently use for support in the medical support in  
16    the Notice.     So this gives all potential bidders at  
17    least some sense of the size of that support.

18            MR. BELL:     Tom Bell, again.     The mix of  
19    monies that we use in the various programs is something  
20    that we're now sharing with the RMI Government in terms  
21    of prioritization.     And just to say that we're going to  
22    spend that money the same way or whether, for instance,  
23    the Lawrence Livermore Program, which has been somewhat  
24    reduced this year because of the large increase in the  
25    medical costs, whether it needs dollars in this year,

1 there are very important questions to be answered here.  
2 And I don't know whether we can specifically state it.  
3 That's why we left it out originally, that the \$1.3  
4 will be an exact amount that we say we can allocate.

5 DR. SELIGMAN: I didn't say that at all. All  
6 I said was that it's an estimate of amount that we  
7 currently spend. But I think -- I guess the answer to  
8 your question, Gordon, is that in this case the  
9 mathematics is not that simple. That certainly it will  
10 be no more than \$1.3 million dollars in the logistics  
11 cost available, but we would have to again look at the  
12 proposals that bidder comes in with and weigh the sums  
13 of money that they are requesting for support and  
14 balance that against our other priorities for  
15 supporting the environmental program. Whether we could  
16 carve out that \$1.3 million, whether there would be  
17 some money less than that is really impossible to  
18 answer at this point, until such time that we actually  
19 get a proposal from a bidder.

20 MR. BEATTIE: Greg Beattie. As an interested  
21 party and as a potential bidder, I'm looking at the  
22 second alternative of combining logistics in the  
23 medical budget. I can tell what I need as a  
24 contractor. I need a dollar amount to work with. So  
25 if you have \$1.3 and you're going to have to carve out

1 some of that money to provide the logistical support  
2 for the other programs, then carve it out. But as a  
3 contractor I need to know, finitely, what that dollar  
4 value is that I would have to spend and would have  
5 available to do the medical and the logistical.

6 So it would be important to identify the  
7 specific dollar amount.

8 I have some other questions, if I may, while  
9 I have the microphone. Do you have an estimated date  
10 when the RFP will actually be published?

11 DR. SELIGMAN: Yes.

12 MR. BEATTIE: Okay. What is that date?

13 DR. SELIGMAN: Sometime -- we're hoping to  
14 issue it sometime in the last week of August.

15 MR. BEATTIE: How much time for preparation  
16 would a bidder have? When will the submission be due?

17 DR. SELIGMAN: We are currently thinking  
18 about between 30 to 45 days, probably 35 days.

19 MR. BEATTIE: Following the submission, how  
20 much time will DOE need for the consideration,  
21 selection and award?

22 DR. SELIGMAN: We're planning to submit this  
23 to NIH for their review in early October, giving them  
24 approximately a two-month period of time for  
25 independent review, which should be November or

1 December, with the hope that I will have received in my  
2 hands their recommendations by early January. At which  
3 point we would turn that recommendation over to our  
4 people here in Oakland to, essentially, begin  
5 negotiations, and, hopefully, award by no later than by  
6 March of '98.

7 MR. BEATTIE: In the final RFP document, will  
8 you have selection criteria? And, typically, what we  
9 have seen is points awarded for various components  
10 within the document.

11 MR. UPDEGROVE: We have a program rule and  
12 that has all the criteria in it. That's Program Rule  
13 602. We also have the Merit Review System, and that  
14 doesn't have any point system. We had not intended to  
15 publish a point system. We have the evaluation  
16 criteria in the draft notice now, and we've had some  
17 discussions with procurement counsel about, perhaps,  
18 amplifying that a little bit more.

19 But as far as points, we wouldn't be  
20 publishing that.

21 MR. BEATTIE: Again, a few questions about  
22 the existing contract agreements, the agreements  
23 themselves, and also the performance under those  
24 agreements.

25 First, let me ask about the agreement with

1 Straub. Is the existing contract document, is that  
2 available for review by interested parties?

3 MR. UPDEGROVE: Tom, you want to field that  
4 one?

5 MR. BELL: That is a subcontract under  
6 Bechtel's arrangements, and I guess I'd have to check  
7 with Bechtel. Bill, what do you think regarding the  
8 release of that subcontract.

9 THE REPORTER: I'm sorry. Your name again?

10 DR. SELIGMAN: Could you use the microphone?

11 MR. JACKSON: Bill Jackson, Department of  
12 Energy. That's a subcontract that Bechtel has with  
13 Straub Clinic and Hospital and the PIMS operations.  
14 Greg, I'd have to ask Bechtel to check with their  
15 G.C.'s the rules of which that could be made public or  
16 available to anyone. I don't know. I'm sure Straub  
17 may have their own rules as well as their own counsel.  
18 I can't answer that.

19 Diana, you have any thoughts on that?

20 DR. SELIGMAN: Diana, use the mike, please?

21 MS. CLARK: Diana Clark with the General  
22 Counsel's Office. I would only underscore what Bill  
23 has already said, which is that the parties to the  
24 contract would be ones that would determine the  
25 releasability. I don't think it's anything that either

1 of us can answer. The parties themselves need to be  
2 asked.

3 MR. BEATTIE: The reason for my question is,  
4 as an interested party, we would want to evaluate that  
5 contract document to determine whether or not use of  
6 Straub -- and Straub is a fine, fine hospital and  
7 clinic operation I tremendously respect. And Mercy has  
8 worked closely with Straub, and we have very, very high  
9 praise for them. But as a contractor, we would want to  
10 be very diligent in evaluating that contract agreement  
11 to see whether or not that would provide the best value  
12 for the particular program that we would want to design  
13 and construct.

14 There are alternatives, and we, certainly, in  
15 our objective of getting the best value for the  
16 Marshallese, for the users, we would want to take a  
17 look at that agreement to see whether or not that was  
18 their value.

19 Also, I have other technical questions about  
20 the agreement. Is it assignable? You know, would we  
21 be operating under that agreement? You know, other  
22 technical issues related to that contract document.

23 MR. UPDEGROVE: What we'll do is we'll take  
24 an action to get with Bechtel to see what sort of  
25 releasability they will give to us in a fairly quick

1 manner, rather than trying to go through something like  
2 the Freedom of Information Act. I think we've got an  
3 easier one, and we'll try that.

4 MR. BEATTIE: Also, in follow-up to that, I  
5 have other questions that are related to the other  
6 contracted parties. Tripler Army Medical, for example;  
7 Army Medical Center, I believe there is a contract  
8 there. There's a contract with the U.S Army at the  
9 Kwajalein Hospital and the use of the mammography  
10 service there. That contract document and other  
11 agreements, would those be available?

12 Certainly, as an interested party, I need to  
13 know the terms and conditions, what I am purchasing,  
14 what we would be paying for in order to integrate that  
15 information into a proposal that we would construct.

16 MR. JACKSON: Bill Jackson, DOE. With  
17 respect to the contract at Kwajalein, that's between  
18 the DOE and the Department of Defense. So that's  
19 generally available, and you can see what the terms of  
20 them are and what the working relationships are. In  
21 that sense, it's assignable. Yes.

22 DR. SELIGMAN: I think the point is well  
23 taken, which is that beginning with our multiple  
24 contracts out there with different organizations,  
25 whether they're contracts or subcontracts between

1 Bechtel and Straub or contracts between the Department  
2 of Energy and the Department the Defense in Kwajalein.  
3 I think it would be in the interest of the Department  
4 of Energy and those who are bidding on this to put  
5 together, as best we can, all of the existing contracts  
6 in a package so that there are at least in a form for  
7 potential bidders what contractual arrangements exist.

8 Are there any problems doing that other than  
9 the fact that there are some contractors outside of our  
10 immediate domain?

11 MR. BEATTIE: Might I ask additional  
12 questions? I don't want to monopolize this.

13 DR. SELIGMAN: Yes. If there is someone else  
14 on the floor who would like to make a comment?

15 MAYOR MATAYOSHI: James Matayoshi. I have a  
16 question for Dr. Seligman, and this is in regard to, is  
17 it possible that DOE may attach the budget, the \$6.8  
18 million dollar budget as appendix to the bids so each  
19 individual bidders have an understanding of what or how  
20 the whole program is being designed so they will want  
21 to work with it.

22 And my other question was, when we met in  
23 Majuro and we expressed our needs and the kind of  
24 changes we wanted in the program, I just want to have a  
25 piece of mind in following through what we had wanted

1 to have happen and the kind of changes. And this  
2 question is directed to these bidders like Mercy  
3 International. They have foundations within their  
4 program that they may also contribute to these  
5 communities. Because we originally wanted to expand  
6 our departments in terms of what is a radiogenic  
7 condition and what is not and how they can provide  
8 beyond that, what the contract says; if those kinds of  
9 services can be provided to this community as part of  
10 their extra courtesy or extra willingness to help our  
11 community?

12 And lastly, if before the August deadline, if  
13 Mercy International, Straub Clinic, and these other  
14 bidders, if they could set some time to visit our  
15 Islands or have an orientation trip to familiarize  
16 themselves in what kind situation they're dealing with  
17 geographically or logistically in the Marshall Islands  
18 with the two communities so that you have an  
19 understanding of our situation, we would be willing to  
20 maybe sit down individually to discuss or brief them of  
21 what kinds of situations we have at home.

22 Thank you, Dr. Seligman.

23 DR. SELIGMAN: Your first point about putting  
24 the entire \$6.8 million dollars budget in the RFP, I  
25 don't have any objection to that. This is public

1 information that the bidders would find useful to know  
2 how much is going to our environmental versus our DOE  
3 assessment program, which is our medical program.

4 As a point of information, I don't see any  
5 problem in putting that information in. Tom?

6 MR. BELL: I might add, at the beginning of  
7 this fiscal year we provided that information to  
8 Ambassador de Brum, and it hasn't changed that much  
9 since we gave it to them. So this information has been  
10 shared with the RMI Government. It's just that it may  
11 not be down at the local level. So, certainly, we  
12 project a new year budget, and we'll begin to talk  
13 about priorities. That will have some impact on what  
14 the 1998 budget will look like. And it may be a little  
15 different than it was last year.

16 We aren't really quite at the point to decide  
17 how that allocation will be made, but I think the  
18 budget for this last year 1997, is a matter of record  
19 and has been shared with RMI and certainly could be  
20 shared soon.

21 DR. SELIGMAN: One comment in response to the  
22 last comment. This is the second time this issue came  
23 up, by the way, the orientation trip. We would  
24 certainly be willing to make the Department of Energy  
25 staff available in the person of Bill Jackson for such

1 a site visit prior to the time that applications are  
2 submitted, which I guess is sometime mid-to-late  
3 August.

4 And again, if there are bidders out there who  
5 would like to make such a visit just to see the nature  
6 of the material and the people we have posted out  
7 there, and to get a feel for the communities and talk  
8 to individuals out there; we would certainly be willing  
9 to set a site visit up for potential bidders.

10 MR. UPDEGROVE: The plan there would be for  
11 us to issue the Federal Register Notice and let anybody  
12 who is interested in participating in some sort of site  
13 visit like that, would respond to Neil.

14 You would let Neil Barss know, who is our  
15 project officer. He's named in the Federal Register  
16 Notice. Let him know that you want a site visit, and  
17 then we'll coordinate a site visit subsequent to the  
18 publication of the Federal Register Notice and prior to  
19 you submitting your applications. That's one of the  
20 reasons that I think we were originally going to want  
21 to go with 30 days, but if you have had a site visit, I  
22 think 45 would be more appropriate.

23 What you'll see in the Federal Register  
24 Notice will say if you want to participate in a site  
25 visit, contact Neil, he'll put you on the list.

1 DR. SELIGMAN: Any comments, questions?

2 DR. WILLIAMS: Thank you very much. Victor  
3 Williams. My comment is more or less a plea, because  
4 the undercurrent in all this is the concern for the  
5 human part of the program. I think that that is the  
6 concern of the Marshallese, more than the monies. The  
7 monies are always important, but the undercurrent of  
8 human events and human concerns are still there.

9 And I gather that is why they are  
10 dissatisfied with the program as it is now. I think  
11 that that human element needs to be emphasized in the  
12 selection of people that are going to handle the  
13 program and in all the other considerations that are  
14 going to be coming up in the future. It's my  
15 experience in Samoa that when money ran out, the big  
16 entities always said, well, we can't handle this any  
17 more. And then the people that are really affected are  
18 the patients, the people who need care. And they are  
19 the real concern here. Thank you very much.

20 MR. BELL: Might I add something? The  
21 flexibility of the program and being in a situation  
22 where patients need to be cared for, especially in the  
23 fiscal year; it's the money that we have at Bechtel,  
24 Nevada that enables us to handle those patients  
25 effectively. So the mix of monies are set up in a way

1 for special use. We have our mission in the Spring and  
2 a lot of those referrals don't know what happened until  
3 early Summer. It's the Bechtel part of the budget that  
4 allows us to be flexible in getting patients the  
5 medical care needed.

6 So that aspect is very important as is our  
7 responsiveness and our ability to do that. And we need  
8 to kind of factor that into the process.

9 DR. SELIGMAN: As we currently need it.

10 MR. BEATTIE: We certainly welcome the  
11 opportunity to visit the Island communities, and I  
12 really think that that's an excellent suggestion to  
13 really get at the grass roots, at the community level  
14 and help further define and further specify what  
15 they're looking for. That's an excellent idea.

16 Doctor, I echo your comment in terms of  
17 losing sight of the end user. And the questions that  
18 I'm asking are not to diminish that emphasis.

19 Certainly, as an interested party, we  
20 emphasize getting service to the end user, but getting  
21 through the technical issues of the government  
22 procurement process requires that we have a real good  
23 handle on those issues. So if I may, I have a few more  
24 questions. I would like to clarify the budget, if I  
25 may.

1 I understand, currently, that for fiscal year  
2 '97, the medical budget is \$1.27 million; and the RFP  
3 as released is \$1.1. Why is there a decrease in the  
4 budget going from '97 to '98?

5 DR. SELIGMAN: Tom Bell?

6 MR. BELL: The 1.27 has been a rather large  
7 expansion of the Brookhaven Program this year in its  
8 needs for its personnel there. It was a mandate that  
9 we met in the programs to get there. We're trying to  
10 get the program back in the realm where we really feel  
11 it belongs. It was about \$.8 million up until  
12 recently, and we're trying to challenge the bidders to  
13 think about it, to provide that care in dollars that  
14 are really more representative of the field, the amount  
15 that we think we can spend on that.

16 However, as we mentioned, there's flexibility  
17 in the budget, and there's prioritization that we have  
18 with RMI that allow us to change that as we go along.  
19 But we need to see what the program is like if we need  
20 to do that.

21 MR. BEATTIE: I would just like to emphasize  
22 that as advocating for the end users that, if the \$1.27  
23 could be made available, that would be preferable.

24 I guess, in looking at future years, what  
25 does the DOE anticipate in terms of increasing that

1 budget? Will there be any consideration for inflation  
2 over the subsequent years? That is, the Federal  
3 Register said a 5-year period; the first year is \$1.1.  
4 Will there be an inflation factor built into the  
5 successive years?

6 MR. UPDEGROVE: The current budget that I've  
7 seen is straight-lined, certainly, through '99.

8 MR. BEATTIE: I just have a follow-up point  
9 that I'd like to make in terms of the budget. And,  
10 Tom, I recognize your point in terms of wanting to  
11 have -- the government wanting to get to a budget that  
12 makes sense to them. But I would just like to point  
13 out that there are additional things that are being  
14 required of the new contractor in the RFP that are over  
15 and above what's currently being provided.

16 Those services and those things take  
17 additional resources, and I just would like to point  
18 out a couple of things. Number one, advisory  
19 committees are to established under this new RFP. That  
20 will take money to make that happen. In order for the  
21 advisory committees to be put in place, that would  
22 require additional resource, resource on the part of  
23 the whole community's resource on the part of the  
24 contractor. I just wanted to point that out.

25 Training programs for Marshallese, that's

1 over and above what's currently being provided under  
2 the current contractor. The infrastructure development  
3 is over and above what is currently being provided by  
4 the current contractor. So I'm just trying to point  
5 that out and trying to reconcile that with myself.  
6 We're looking at a little bit of a decrease, then we're  
7 looking at expanding and doing more with the monies  
8 that are available. And just for the record, I did  
9 want to point that out.

10 I do have questions about the available  
11 technology. And in the RFP, there is a pretty  
12 comprehensive list of number and types of equipment  
13 that are listed. I was wondering if we could get very  
14 specific in terms of inventorying that equipment?  
15 Things that I would like to know would include the age  
16 of the equipment, it's usability, does it have a  
17 maintenance contract, what is the current biomedical  
18 state of that technology. Is it usable; can it be  
19 implemented? Can a new contractor come in and take  
20 control of this technology and implement it?

21 As an interested party, I have to know the  
22 implementation costs of operationallizing that  
23 technology. Is that information available?

24 MR. BELL: I would think that we would have  
25 to go back to Bechtel. And to really get all that

1 information, I don't believe I have that at my  
2 fingertips right now. Certainly, I've tried to keep it  
3 up to date to the current technologies. I don't know  
4 exactly how old is.

5 I don't think a lot of it is on maintenance  
6 contract. It's equipment bought, usually, with  
7 equipment monies; and, normally, it has to be upgraded.  
8 But in addressing one of your questions about some of  
9 these additional costs of advisory committees or other  
10 costs, some of the reasons we choose to reduce the  
11 \$1.27 to \$1.1 is to allow our flexibility in needs  
12 which are all related to making this all happen. And  
13 there will be some costs in the transition of trying to  
14 run the Brookhaven Program currently as we're trying to  
15 phase in the new contractor.

16 That's going to be a challenge in a level  
17 budget. So that **was** one of the reasons why we chose  
18 that.

19 DR. SELIGMAN: In Appendix H there is a list  
20 of equipment used by Brookhaven National Laboratory. I  
21 guess the question that is being asked is, is all of  
22 this equipment going to be available to the new  
23 contractor? And what is the **age**, date, viability, and  
24 warranty, if it exists, with this equipment?

25 I guess my presumption is that this is the

1 kind of information we should gather and have available  
2 to the potential bidders. Is that correct?

3 MR. BEATTIE: Yes. Thank you.

4 DR. SELIGMAN I guess the only comment I had,  
5 Mr. Beattie, regarding the thing that you pointed out  
6 in the statement of work that is over and above, I  
7 would think of it more as a shift in emphasis. And I  
8 would look carefully.

9 We think that, indeed, the budget we're  
10 proposing does allow for that shift in emphasis in the  
11 program and the reallocation of resources that are  
12 being placed into one aspect of the program might  
13 better be placed in areas such as training and the  
14 community organizations.

15 But again, we would like to look at the  
16 budgets that are proposed by potential bidders to see  
17 how they handle both the provision of the kinds of  
18 services that are offered now and the requirements that  
19 are part of this and not previously been part of it,  
20 part of the previous program.

21 MR. BEATTIE: In terms of the reporting  
22 requirements -- and I duly respect DOE's need for  
23 information for monitoring. And, certainly, if Mercy  
24 was selected, we would want to provide and be  
25 forthcoming with all possible information in

1 utilization, financial and otherwise.

2 I just have a few questions about some of the  
3 cost reporting requirements. I do understand that they  
4 may be legislatively required, but if there is an  
5 opportunity where we might be able to modify things.

6 Again, you know, reporting requirements  
7 increase administrative costs. And if we're spending  
8 our monies on reports, then we're not spending it on  
9 people. Again, we want to spend it on people.

10 So I do have a question about monthly  
11 reports, monthly accounting reports and would question  
12 whether those were necessary. I certainly would think  
13 that a quarterly-financial report might be the  
14 suggested alternative to providing a monthly report.

15 We certainly have accounting systems in place  
16 that can generate a general ledger in real time, and we  
17 can give you a general ledger as we would currently  
18 have it. But I'm speaking of, you know, giving you an  
19 expense, a comprehensive expense summary by line item  
20 on a monthly basis, and I would like to know if  
21 quarterly would be a better alternative?

22 MR. UPDEGROVE: Neil Barss and I talked at  
23 length about what sort of requirements that we wanted.  
24 And, I guess, I thought that at the outset of this  
25 program it would be helpful to see monthly, at least to

1 start, since we're familiar with the new contractor.

2 It may be a little more excessive than we'd  
3 like, but it's something that we'll consider. You  
4 know, I'm not going to say we're going to take it away,  
5 but it's certainly something to consider. And Neil and  
6 I talked about that, and I tried to convey that to him  
7 as well, which is, we don't want to burden your  
8 resources with paper when you want to be looking at  
9 people.

10 So we're trying to learn that. We appreciate  
11 what you're saying.

12 MR. BEATTIE: I had also had a question.  
13 There is a reference in the document to producing those  
14 reports in prescribed DOE format or format prescribed  
15 by DOE. And we use generally accepted accounting  
16 principles and produce our accounting documents.

17 We're audited on an annual basis by external  
18 auditors. Would that be satisfactory for the  
19 accounting reports, generally accepted accounting  
20 principles?

21 MR. UPDEGROVE: Depending on how detailed  
22 they are. What we'll see sometimes from those sorts of  
23 reports are basically balance sheets, income  
24 statements. We need something that's more closely  
25 related to the program expenditures.

1 MR. BEATTIE: Project specific?

2 MR. UPDEGROVE: Yes, somewhat. I'm not sure  
3 that I can answer your question right now.

4 MR. BELL: Tom Bell. In the Office of  
5 International Programs we kind of have standardized the  
6 way we present our budget, so we can look across all  
7 the programs and pick out particulars in our reviews.

8 It's not a very difficult job. I think the  
9 others have found that they put it in two pages in four  
10 days. It's not nearly as sensitive as what you're  
11 talking about. I think when you find what the report  
12 looks like, that it's really just an attempt for us to  
13 get into categories like supplies and travel and  
14 referral costs to give us a balance on how we're  
15 spending dollars and assessing whether it is going  
16 along with the current year, that sort of thing.

17 And with the monthly, it's for that reason.  
18 If all of a sudden we find the medical costs escalating  
19 rapidly for some reason, then we might be able to work  
20 a little more closely to figure out why that's  
21 happening. And what we need to do to look at the  
22 budget, that sort of thing. So there are plenty of  
23 reasons for that.

24 DR. SELIGMAN: Just so it's clear, we want to  
25 make sure we get the information that's necessary to be

1 good program managers. And so, essentially, this  
2 paragraph in the RFP essentially reserves our right to  
3 ensure that the content and the format is appropriate.

4 But you should be reassured that the kind of  
5 information that we generally look for is what is  
6 usually provided for in standard accounting formats,  
7 along the lines that Tom has specified.

8 MR. BENJAMIN: Gordon Benjamin from Rongelap.  
9 We were wondering if maybe at 3:00 o'clock today the  
10 local governments would like to meet with the different  
11 potential bidders on this? And if this room **was**  
12 available, we'd like to be able to express some of the  
13 concerns that the local people have with medical  
14 provisions.

15 DR. SELIGMAN: That would be fine.

16 MR. BENJAMIN: I don't know their flight  
17 schedules and so forth, but if they were able to do  
18 that, we'd like to be available at 3:00.

19 DR. SELIGMAN: Did everyone hear that? This  
20 room will be available at 3:00 o'clock for the local  
21 governments to meet with financial bidders to discuss  
22 and express their concerns and interests. So we'll  
23 keep this room open until then.

24 MR. BENJAMIN: The other thing is we were  
25 wondering that while a bidder puts their proposal

1 together, if they would include some of the things that  
2 the community will be expressing at this time and does  
3 not see in the RFP; for example, because of  
4 congressional constraints. And our colleagues are very  
5 familiar with what I'm talking about; exposed versus  
6 unexposed; or radiogenic versus nonradiogenic. If some  
7 of the potential bidders want to somehow work it into  
8 their proposal where they are treating, for example,  
9 some nonradiogenic illnesses, would the peer review  
10 panel -- or maybe this is this question for them.

11 First of all, can they include that in their  
12 proposal, and would the review panel give them extra  
13 consideration for that?

14 DR. SELIGMAN: Well, in the request for  
15 proposals we talk about the provision of medical care  
16 and treatment of other diseases or injuries as time and  
17 resources permit. In that statement we hope to, at  
18 least, open the door to consideration of those  
19 conditions beyond the tertiary congressional focus that  
20 we have from congress.

21 So, I guess, the answer would be, because  
22 this statement is indeed part of our request for  
23 proposals, our statement of work, that no one would be  
24 penalized for including such in their proposal.

25 DR. WILLIAMS: Just a comment on the time

1 frame. I have a flight at 2:45, but I would be very  
2 happy to meet with the Mayor and the group from the  
3 Marshallese before that, shortly after this session, if  
4 that's possible. And I think the idea of visiting the  
5 territory is very, very important; and I would certain  
6 welcome the chance to do that.

7 DR. SELIGMAN: I'm sorry. My role is to  
8 provide the room.

9 MR. BENJAMIN: Scheduling is always  
10 difficult. I believe right now trying to set up a  
11 lunch meeting on some issues with Howard right now. If  
12 possible, right after that meeting before the 3:00  
13 o'clock -- but he has to leave at 2:45. So I'm not  
14 sure if we'll have a chance.

15 DR. SELIGMAN: I'll let you work that out.

16 MR. BENJAMIN: You want to visit the Marshall  
17 Islands? Okay. Good.

18 DR. SELIGMAN: Other comments?

19 MR. BEATTIE: I have a couple of other  
20 technical questions. One is on the reporting  
21 requirements after that. Will an A-133 compliance  
22 audit be required of the contractor? And the reason I  
23 ask that is we went through A-133 compliance, and it  
24 was awfully, darn expensive.

25 And you know, we're audited, and we have

1 external auditors. And I don't know if this project  
2 would be subject to that degree of scrutiny.

3 MR. UPDEGROVE: Joan, do you have anything?

4 MS. MAC CRESKY: I think that --

5 THE REPORTER: Your name, please?

6 MS. MAC CRESKY: Joan Mac Cresky. I think  
7 that whatever you're now required to follow-up, if it's  
8 O and B circular A-133, that that would probably apply  
9 here as well. It's more dependent on you organization  
10 and which circular you're under. I believe it would.

11 MR. UPDEGROVE: We can check that out further  
12 and get back to him?

13 MS. MAC CRESKY: Yes.

14 MR. MASEK: John Masek, M-a-s-e-k, from the  
15 Utrik Local Government. I was just looking back at the  
16 RFP again. We are in the background. You have a group  
17 of 131 members remaining in the tested, the comparison  
18 group of 107 people. Then getting into Section 3,  
19 Section A, Subparagraph A, you talk about medical  
20 services should be to the "effected Marshallese  
21 citizens" of Rongelap and Utrik.

22 And as a point of clarification, when you say  
23 the "effected" people, are you simply talking about the  
24 131 previously set forth in the background, or are you  
25 including other members of the community that have been

1 affected by the radiation testing?

2 MR. BELL: I think legally we're talking  
3 about 131 and 107 comparison group. However, the whole  
4 objective is to try to find creative ways to do the  
5 kind of medicine in the community that would allow us  
6 some flexibility to provide some primary care to others  
7 who might need it at the same time that they're there.

8 And the exact numbers would be dependent on  
9 how much the finances would allow and how much they  
10 could do in that framework.

11 Under the mandate of the law, that's the  
12 group that have to ensure that they are taken care of.  
13 It has to be formal and registered that way, because  
14 that's the group that congress expects us to take care  
15 of.

16 But the whole objective is to try to be more  
17 creative and a bit more focused, if possible.

18 MR. BEATTIE: I have a question regarding the  
19 historical funding for tertiary care. The Section 177  
20 Program is challenged by referring persons to tertiary  
21 care. That's the most expensive part of the budget.  
22 Certainly, one or two catastrophic cases can consume  
23 our tertiary care budget.

24 As an interested party, again, we would want  
25 to know what amount of money has been spent,

1 preferably, over the last 5 years on tertiary care  
2 funding. That's a piece of information we would like  
3 to see; I guess, a process that we would like to know  
4 if we establish a budget that will include tertiary  
5 care. And I would assume we would construct a primary  
6 care, secondary care, tertiary care budget, something  
7 along that line.

8 If we set a line item for tertiary care, and  
9 you know, anybody could pick out a figure; let's say  
10 it's half a million dollars, if that half million  
11 dollars is consumed in a budgetary period, what happens  
12 then?

13 MR. BELL: The tertiary care costs have  
14 fluctuated over the last couple of years. About three  
15 years ago it was running at \$120K here, then suddenly  
16 because of some changes in ultrasonography and other  
17 things that would apply, there were additional  
18 referrals to Honolulu based on thyroid concerns on  
19 small nodules. And we ended up with a budget that was  
20 something like \$540 thousand dollars for tertiary care,  
21 greatly in excess of anything we'd ever experienced in  
22 the program before.

23 Part of our effort recently in the land-based  
24 processes is to try to provide more tertiary care  
25 concepts at Kwajalein Hospital. And in the last year

1 or two we've been very successful and doing more of  
2 that localized. And the tertiary care costs have gone  
3 back down to more of a normal range. And I think this  
4 year they run -- I don't know. I don't have the final  
5 figures, because it takes awhile to get the dollars.  
6 My guess would be around \$220 thousand dollars this  
7 year maybe because we're able to do a lot more with  
8 surgeries in the follow-up work at Kwajalein. And I  
9 have to refer to Honolulu for those. So I would say  
10 some of the challenge is not how much you spend but how  
11 you can create a community-based process that provides  
12 more of that locally and thereby eliminates some of the  
13 need for tertiary care.

14 Obviously, doing an MRI or something of that  
15 nature that's a lot more sophisticated, you have to go  
16 to Honolulu. But in terms of doing surgeries or  
17 colonoscopies or colon surgery, we've been very  
18 successful recently in Kwajalein. It's helped to  
19 reduce the tertiary care costs. So it is fluctuating,  
20 and it depends a lot on the nature of the kind of care  
21 that you're providing.

22 MR. BEATTIE: I appreciate that, Tom. And,  
23 you know, if we were selected, and I know the selected  
24 contractor is going to have to make additional efforts  
25 to fill local capacity and to use local capacity and to

1 creatively do things in the Marshall Islands as much as  
2 possible.

3 I recognize that, and I accept that challenge  
4 to do that. But, you know, that does not answer the  
5 question of what happens when the money runs out. I  
6 know that you can minimize the need for tertiary care,  
7 and we can help mitigate that, and we will make every  
8 effort. And I know that the government is making  
9 efforts to do that. However, this is a population that  
10 is graying, it is getting older. And with age, you  
11 know, you're going to see an increasing amount of  
12 disease in this population because they're like all of  
13 us. Everybody that gets old starts facing chronic  
14 conditions, heart disease, cancer. Those things start  
15 appearing as the population gets older.

16 This population is getting older, and I would  
17 submit that the tertiary-care dollars that this  
18 population is going to consume is certainly going to  
19 increase and not decrease.

20 And my question is, what happens 5 years out  
21 when, for example -- this is hypothetical and it  
22 certainly could happen -- one or two cases consume \$250  
23 thousand dollars. What happens then?

24 DR. SELIGMAN: Two things could happen.  
25 Ultimately, the question is who indemnifies our cost,

1 essentially. In the past when we've been able to  
2 manage those costs with our Department of Energy budget  
3 by shifting cost within our program, we have done so.

4 But if the time came when total costs really  
5 impacted our ability to deliver primary care, if the  
6 cost of the program escalated to the point where we  
7 could no longer manage it within the budget under the  
8 Marshall Islands medical program or under the budget of  
9 the health studies, I would simply have to go to  
10 congress and ask them for additional appropriations,  
11 additional sources of money to support the program.

12 So there are basically two avenues. You take  
13 it from within the program, which is essentially what  
14 we have done in the past. And failing that, which we  
15 have not yet had to face, we would go to our  
16 appropriators to ask for additional resources.

17 MR. BEATTIE: I guess, on the flip side to  
18 that question is if the contractor in working with the  
19 local community and local government could save money  
20 within the budget, could those savings be used  
21 discretionarily by the contractor and the community?

22 DR. SELIGMAN: To do what?

23 MR. BEATTIE: For example, one thing we're  
24 doing in the 177 Program is building dispensaries at  
25 the local level, and we have ear-marked monies to do

1 that. And some years we've experienced lulls in our  
2 tertiary care budget, and as a result we've allocated  
3 about a \$100 thousand dollars per island and have built  
4 a dispensary.

5 DR. SELIGMAN: I don't see why not. I think  
6 the purpose of this program description is to give the  
7 contractor a fair amount of discretion as long as the  
8 activities that you are conducting are within the  
9 program description and not other unrelated medical  
10 activities.

11 If in any particular year through the  
12 creation of efficiency as described you could  
13 reallocate resources in one direction as opposed to  
14 another, that would be fine.

15 MR. UPDEGROVE: What you'll do is you'll be  
16 submitting a continuation application which will be a  
17 whole new proposal for the following budget year. And  
18 what you can do is issue that funding left over and use  
19 that as carry-over funding.

20 DR. SELIGMAN: Yes?

21 MAYOR MATAYOSHI: I think what Greg said is  
22 very interesting at least for my local government  
23 group, because we want to also define our role because  
24 we may have some ways that we can assist in saving our  
25 resources; like in logistics, how we are both provided

1 to 177 and our cost.

2 And what I'm looking at is, after the  
3 contract, all of this whole process is over and the  
4 contractor that will be doing this, the door will be  
5 open for us in local government to continue to play a  
6 role or exchange of information insuring what we can  
7 do, that we have resources. Because we had some ideas  
8 in mind that are still floating around, and perhaps,  
9 maybe, the local government can cough up some money of  
10 it's own within this operation budget to help eliminate  
11 a lot of the burden that will be on these people that  
12 will be providing health care to our people. We would  
13 like to continue to play a role.

14 DR. SELIGMAN: I hope the answer to your  
15 question is yes, yes, and yes. In the section under  
16 the Federal Register, under "Direct Marshallese  
17 Involvement," we talked about the importance of  
18 establishing a regular process for community and  
19 patient input, recommendations, improvements and  
20 changes to the care delivery program.

21 And we're hoping that built into the  
22 applications to the successful awardee will be a  
23 process which will allow for that kind of input and  
24 those kinds of changes, those kinds of measures.

25 So, hopefully, that should be in any

1 successful applicant's application that's successful to  
2 win this contract.

3 MR. BENJAMIN: Thanks, Paul. Just as a  
4 general observation, listening to Greg's many, many  
5 questions, which are all very, very pertinent; as a  
6 local government representative here, I think what we'd  
7 like to see that all these questions are answered  
8 concretely for all the potential bidders.

9 And I don't want to take anything away from  
10 Brookhaven, but when the bids, the RFP's are actually  
11 submitted; even if Brookhaven submits one not under  
12 Brookhaven's name, that the NIH panel knows for sure  
13 that Brookhaven has some information that possibly the  
14 others don't have. That is a concern that we do have  
15 over here.

16 And listening to these questions about the  
17 budget, how much is that equipment and what's their  
18 initial life right now and so forth, I think Brookhaven  
19 knows exactly what that is.

20 I'm assuming that, but, you know, that  
21 eventually all that information should be given to  
22 everybody so that everybody has a level playing field  
23 going into the NIH panel.

24 DR. SELIGMAN: You're absolutely correct.  
25 And I think the purposes of these questions is we are

1 transcribing them, and you will be provided all that  
2 information to all the potential applicants.

3           There are some things you can't overcome.  
4 You can't overcome 40 years experience in running a  
5 program. In as much as we can get all of the relevant  
6 information, including, as Mr. Beattie pointed out, the  
7 existing contracts, subcontracts that exist, the state  
8 and quality of equipment that are out there and other  
9 pieces of pertinent information necessary for bidders  
10 to compete on a level playing field; we want to make  
11 that information available to everyone.

12           Although we don't necessarily have the  
13 answers today, we are noting these questions and we  
14 will make sure that information is available to all  
15 potential bidders.

16           MR. BENJAMIN: I appreciate that process that  
17 is going on today. I just wanted to make sure that the  
18 panel is reviewing everything at this level.

19           DR. SELIGMAN: I will also point out that at  
20 the close of this meeting there are an additional 30  
21 days for us to receive comments in writing.

22           And again, at which point, if there are  
23 additional clarifications or anything that's necessary,  
24 we will again receive those written comments, modify  
25 the RFP, and collect that information for distribution

1 as necessary.

2 So this meeting is not the end point for  
3 receiving those comments.

4 MR. HILLS: There are just a couple things I  
5 wanted to mention for the record very briefly. One of  
6 them is you've heard from Mayor Matayayoshi several  
7 times an invitation to the interested parties to work  
8 with the government of Rongelap, to work with his  
9 office. And, obviously, his office wants to continue  
10 working with the DOE staff as they have been.

11 But the point is, if there is information  
12 that isn't available through this process or that is  
13 published in the RFP related to Rongelap, that if  
14 interested parties don't know how to get that  
15 information, they are certainly welcome to come talk  
16 with us.

17 And the other point is, from talking to Holly  
18 and Ambassador de Brum, obviously, when Tom Bell talked  
19 about the budget, he pointed out that's been provided  
20 to the RMI Government and none of the interested  
21 parties. And Rongelap has found in our experience that  
22 talking to the RMI government is always good, because  
23 you always get helpful ideas and information.

24 So in talking about process, again, we  
25 encouraged trying to define process. If there are

1 ideas or information that's not available, for  
2 perfectly good reasons that relate to your need to be  
3 impartial and preserve the integrity of the process;  
4 we're not criticizing that. We're just agreeing with  
5 you that the RMI in addition to Rongelap local  
6 government, RMI is another good place to go to talk.  
7 And we encourage the interested parties to do that.

8           There were a couple of other points that I  
9 just wanted to mention very briefly. You know, in  
10 doing so, we are really concerned about the fact that  
11 we think this is a good process. We think it's moving  
12 in the right direction, and we don't want to do  
13 anything to slow it up or interfere with it or impede  
14 it in any way. And in mentioning these things, we  
15 certainly want to claim immunity from a situation where  
16 you say; well, if you're going to bring up all these  
17 issues this is just going to slow everything down. We  
18 don't want that to happen, and you don't want that to  
19 happen

20           But I just wanted to mention a couple of  
21 things. What really might be appropriate is for the  
22 RMI and or representatives of the local governments  
23 and/or their counsel in Washington to get together with  
24 DOE's counsel and talk about a couple of issues.

25           I just wanted to mention so that the

1 interested parties are aware of the fact there are  
2 outstanding issues relating to such things as  
3 definition of radiogenic illnesses.

4 We note that there is an issue of the  
5 comparison group and it's coverage with the control  
6 group, which isn't reflected in here probably in the  
7 way that the RMI would like to have it reflected. And  
8 that is an issue that can still be talked about.  
9 Rongelap is interested in that issue, has an interest  
10 in that issue.

11 We note that in the Congressional Record it  
12 refers to public 101-426 for some of the definitions of  
13 radiogenic illnesses and the question of the  
14 applicability of that statute and whatnot in the  
15 situation and what its applicability means.

16 That is something, as a matter of record, we  
17 wanted to just identify here as an issue that we might  
18 want to discuss further. Probably, if the interested  
19 parties talked to RMI or to the affected Atolls -- and  
20 I'm not speaking for RMI in any of the things I'm  
21 saying. But, probably, my sense is that probably if  
22 they did, they would find that another issue has to do  
23 with the need for more emphasis on the community-based  
24 nature of this in terms of year round, 24 hours a day.

25 These are people who have medical needs, and

1 those medical needs -- some of them do not fit into  
2 periodic visits. They are things that can arise  
3 anytime during the year. They can arise anytime during  
4 the day.

5 And the question is, how is this program  
6 going to be structured so that people have access on a  
7 daily basis when they need it? Obviously, that's a  
8 big, challenging question and problem. But the need  
9 for greater emphasis on the community-based aspect of  
10 that is something that I think that we have an interest  
11 in.

12 Finally, the description in here in terms of  
13 clinical findings and what the effect of the nuclear  
14 testing program has been, clinically or whatever, on  
15 individuals is one which is more narrow than when I  
16 talked to the Mayor. And we talked with the RMI, and  
17 it is more narrow than what we think is called for.

18 And that's something that, again, we don't  
19 need to try to flash that out right here. We want to,  
20 on the record, identify it as an ongoing issue and  
21 concern that we have; maybe something that, actually,  
22 through our governmental channels, through the RMI and  
23 their government channels, that will be continued to be  
24 addressed.

25 But there are things that, since this is

1 being recorded and since we have an official record  
2 here, we wanted to, at least, just make reference to  
3 those issues.

4 DR. SELIGMAN: Thank you. Just one brief  
5 comment which is, please do note that in the program  
6 requirements we are asking for in the first Subsection  
7 8, that full-time medical services be provided. And we  
8 mean that we're looking at year-round services.

9 So, hopefully, that will address those  
10 issues. I don't believe that anything that you've  
11 stated so far in your statement is a show stopper in  
12 any fashion. Nor would it slow down the process that  
13 we have outlined in terms of both receiving comments  
14 and the publishing of the final notice and going ahead  
15 with the award of this process.

16 I do agree with you that these are issues  
17 that should be and will continue to be discussed.

18 DR. SELIGMAN: Any other comments, questions?

19 MR. BEATTIE: I appreciate your patience, and  
20 I want to thank you and your staff for putting up with  
21 us. But this is my opportunity to find out more. And  
22 doing it in a public forum allows other parties to hear  
23 these same issues and it becomes the public record.

24 And in the spirit of competition, it should  
25 result in a better contract and a better award for the

1 end user. I'm going to ask a few more, if I may.

2 In the RFP there is a question about 25  
3 patients that reside in the United States?

4 DR. SELIGMAN: That's correct.

5 MR. BEATTIE: What consideration should be  
6 given to that patient population? That is number one.

7 Number two is, what if other persons would  
8 move and reside in the United States; what  
9 responsibility would the contractor have to provide  
10 care to those persons?

11 DR. SELIGMAN: In Appendix F, we have a table  
12 that summarizes patient location. There are 13  
13 individuals in Hawaii, and 6 are on the Mainland, U.S.  
14 We called for -- let me refer you to this section. The  
15 answer is yes, some consideration should be provided,  
16 but I'm looking for the section here that refers to it.

17 Yes, it's on page 29128, "Methods by which  
18 medical services will be provided to those patients  
19 (approximately 25) who habitually reside in the United  
20 States, such as other medical care insurance options in  
21 lieu of awardee provided medical services." This is  
22 the column under the Section on Development of  
23 Documentation, No. 8.

24 I think that's pretty self explanatory.  
25 Basically, what we're asking the potential bidder to do

1 is to think about other options for either providing  
2 medical insurance or some other options to insure these  
3 people are provided care. They are part of our  
4 program, and since they are part of that program, we  
5 have the responsibility to insure that they are cared  
6 for.

7 MR. BEATTIE: Does the preferred contractor  
8 provide any health care services to that population?

9 DR. VASWANI: Well, we offer them the same  
10 services that we would. Because we go to the Island  
11 only, we have not yet spread out in the manner in which  
12 you are accustomed to. Mercy Hospital is all over the  
13 place. What we do is we send them a letter and ask  
14 them to come in for their annual checkup or semi-annual  
15 checkup. And some of the times they return, sometimes  
16 they don't.

17 At the present time it's not a requirement in  
18 the sense that we do take care of them whenever they  
19 come to the Islands.

20 DR. SELIGMAN: Does that answer your  
21 question?

22 MR. BEATTIE: As I understand it, it's by  
23 invitation. Brookhaven invites them to go to Honolulu?

24 DR. VASWANI: Yes. We offer them the same  
25 that we would offer all the other patients. We are

1 going to meet in the Marshall Islands, and the surveys  
2 and the admissions are going to be conducted twice a  
3 year. If they can't make it back there, they are close  
4 enough to Honolulu then we offer them the same  
5 services. They are essentially referred to Straub.

6 DR. SELIGMAN: Essentially, they receive the  
7 same letter that all the other participants receive in  
8 terms of participation, but they are somewhat limited  
9 by the venues in which they can receive their exam.

10 MR. BEATTIE: I have a question on  
11 utilization. The question is, do you keep utilization  
12 statistics? In terms of the number of patient visits,  
13 diagnoses, do you record that by the International  
14 Classification of Disease? Are those statistics  
15 available, and if they are, could an interested party  
16 have access to that information?

17 DR. VASWANI: Yes, we do follow the ICD-9  
18 Coding System, and we are putting that into our  
19 computer system right now. So it should be available,  
20 but I'm not sure when.

21 DR. SELIGMAN: But if it would be helpful to  
22 know the number of exams that were conducted and the  
23 follow-up examinations or admissions, say, for the last  
24 3 years and arrange a diagnosis that was seen as part  
25 of those admissions, that can certainly be provided to

1 all potential bidders. So that you know whether we're  
2 seeing diabetes or hypertension or a range of types of  
3 conditions. That will be made available to everyone.

4 MR. BEATTIE: I have a question on the  
5 development of documentation. It indicates that there  
6 should be written treatment protocols developed. I was  
7 wondering if Brookhaven has those protocols, existing  
8 protocols, or would this be new work? Thank you.

9 DR. SELIGMAN: What was the answer to that?

10 DR. VASWANI: It's kind of a new protocol.

11 DR. SELIGMAN: Such existing protocols at  
12 present do not exist.

13 MR. BEATTIE: Also, in the area of reporting,  
14 again, I asked this to be mindful of the administrative  
15 expenses. There is an annual summary report required.  
16 And, certainly, I think that's a good document to have  
17 so you can chronicle what your goals and objectives  
18 are, what you think we should accomplish in here.

19 One of the requirements I think is a good one  
20 is that the report be in Marshallese. And my question  
21 is to the government: Is there some way that the  
22 government could participate in translating the  
23 documents so that the contractor would not have that  
24 administrative burden? If we could creatively share  
25 that requirement, it certainly would decrease our

1 administrative overhead for that particular point in  
2 the RFP.

3 MAYOR MATAYOSHI: My question is, if you got  
4 the contract, will you be employing the local  
5 Marshallese people to do the job? As far as the matter  
6 of interpreting to Marshallese, it is pretty much  
7 important. But what is more important to us is people  
8 being alive.

9 MR. BEATTIE: Yeah. Again, I think our  
10 intention would be to hire qualified staff and to train  
11 people and to hire locally. That would be our  
12 intention. I guess my question is the administrative  
13 overhead and translating a very technical medical  
14 documents to the exacting specifications. I see that  
15 as a challenge.

16 I would just, you know, in working with  
17 partnership in the government would want to know about  
18 the resources that the government might be able to  
19 marshal to assist in that process. I'm just raising it  
20 as, maybe, a way government could be involved in  
21 handling that particular component and not placing that  
22 responsibility on the contractor, necessarily.

23 I mean we certainly could operationallize  
24 that, find somebody to do that. We can talk more at  
25 3:30 about this.

1 DR. SELIGMAN: Senator Yamamura?

2 SENATOR YAMAMURA: Thank you, Dr. Seligman.

3 The question that was raised by Greg Beattie on the  
4 translation, I brought up that question in the 1991 or  
5 '92 meeting here in San Francisco for the DOE to  
6 translate all those results from whatever to a more  
7 comprehensive level for our people to read. And that  
8 has already been done. It was done by the contractor.

9 I have other things to raise up here. It's  
10 really good to hear from Dr. Williams. I would like to  
11 raise some questions. Since, I already know about  
12 Mercy International and Brookhaven, would you please  
13 give us more or expound on your program in dealing with  
14 radiogenic and nonradiogenic patients? Have you had  
15 any experience on that?

16 DR. WILLIAMS: As you know, Nevada has been  
17 involved in radioactive testing for several years, and  
18 the population in southern Utah and in middle Nevada  
19 and also northern Nevada has been very extensively  
20 involved in radiation. So we see a lot of radiation  
21 related illnesses, thyroid, lymphomas, cancers. And my  
22 experience right now is mostly related to surveying  
23 women for breast cancer, but we see other cancers as  
24 well. I'm incorporated but I'm not a firm as big as  
25 some of these other firms that are offering to do this

1 work. I had to rely on some of the personnel at work  
2 for the Raytheon Company in the Marshalls before, and  
3 this opportunity came up.

4 I actually have not prepared -- it's very  
5 interesting to be here today to listen to all the  
6 concerns and all the questions that are raised because,  
7 I have not formally formulated any proposals. But  
8 this, hopefully, will be done in the next few days that  
9 are allotted. I just feel that all the questions that  
10 are been raised are questions that have been commonly  
11 encountered by myself by my experience with the Samoan  
12 Islands.

13 And as a Samoan and as a medical professional  
14 in Samoa, a lot of the concerns are the same concerns  
15 that I have faced when I was the surgeon there from '72  
16 to '78. And presently, I'm in constant contact with  
17 the Islands, because I go there every year and take  
18 this group of physicians who volunteer to do work on  
19 the islands.

20 So that's a brief answer to your concerns. I  
21 could see where the concerns about translation, I think  
22 that shouldn't be much of a concern. Because if you  
23 use local people, a lot of the translation should be  
24 taken care of. I think that my intention would be to  
25 use the Marshallese and provide a forum by which

1 everyday care is taken care of by having the two  
2 gentleman who have worked there before available year  
3 round and then also provide for medical health with  
4 perhaps nurses and PA's and that sort of personnel.

5 So there, again, I may not be there all the  
6 time, but I will certainly make allowances to go there  
7 on the Islands and also gather some of my friends who  
8 have always, traditionally, volunteered in the past. I  
9 think that's about all I can say to answer your  
10 question.

11 SENATOR YAMAMURA: My next question is to Tom  
12 Bell. As you know, we've been seeing people from Utrik  
13 and all our communities. We have flown to Honolulu  
14 Straub Medical Clinic. I would like to know how many  
15 patients are being referred annually, approximately.

16 MR. BELL: Tom Bell with DOE. I don't have  
17 an exact number, but I think this year it's about  
18 around 17 people that have been referred.

19 DR. SELIGMAN: For 1997?

20 MR. BELL: 1997, yes. Last year I think it  
21 was more like 20.

22 DR. SELIGMAN: 1996?

23 MR. BELL: 1996. I can't tell you offhand  
24 what the mix of folks are between Rongelap and Utrik in  
25 the communities, but I think there are larger numbers

1 of Utrik people currently in the 133. So I would  
2 propose that a lot this year are probably patients.

3 SENATOR YAMAMURA: Greg brought up that  
4 question about the limited budget. As I'm aware, the  
5 177 health care forum under the management of Mercy,  
6 they're operating on \$2.0 million a year. We haven't  
7 received any. They addressed the tertiary care and in  
8 referring patients to Honolulu, they should suspend it.  
9 And I compliment the DOE and Brookhaven for referring  
10 patients in these populations of Utrik and Rongelap.  
11 Thank you.

12 DR. SELIGMAN: Any other comments, questions?

13 MR. LEWIS: I'm Redwin Lewis. I'm with Mercy  
14 International, also a question on documentation. We've  
15 talked about sharing budgeting information, but we're  
16 also interested in information about the annual summary  
17 report. Is there one that's currently being done for  
18 this program?

19 MR. BELL: Tom Bell, DOE. The annual summary  
20 report is about a 5 or 6 page report that is required  
21 by congress. Usually, we start formulating about  
22 August, and it's due in final in October each year.  
23 Congress wants it by the first of December.

24 The form has been stable, we just improve on  
25 the numbers. It's not a major undertaking. It's just

1 a method of apprising congress of how many folks have  
2 been taken care of and the costs involved. Yes, that  
3 could be shared.

4 MR. LEWIS: And could we have 5 years of  
5 those annual reports; is that possible?

6 MR. BELL: I certainly can do three; I think  
7 I can do the five.

8 MR. LEWIS: How about strategic plans, are  
9 those available as well?

10 MR. BELL: Strategic plans?

11 MR. LEWIS: Are they in a special issue?

12 MR. BELL: Strategic plans is a new concept  
13 in our office in the last year. We don't really have  
14 those in the past.

15 MR. LEWIS: Could I request that we have a  
16 page worth of the documentation that's requested of the  
17 contractors. Could we have, maybe, a comprehensive  
18 matrix on what is the new provision versus what is  
19 available by the DOE?

20 MR. BELL: I think many of these are new  
21 ideas that are being put on the track to provide more  
22 understanding of how the dollars are spent and how  
23 they're being allocated so that we can get a better  
24 feel for it, where we're putting dollars, what we're  
25 going to do in the future.

1 I think the answer is most of those are not  
2 available, but I'd have to go through them one by one  
3 to look.

4 MR. LEWIS: The ones that are available,  
5 could we have copies of those?

6 DR. SELIGMAN: I'm sorry. What was the  
7 request?

8 MR. BELL: The request, for the record, was  
9 for anything in the documentation that we're asking for  
10 that we have already provided ourselves in the process  
11 during the last couple of years, they would like copies  
12 of those.

13 DR. SELIGMAN: For example?

14 MR. BELL: Well, the annual report being one;  
15 many other things, strategy, long-term strategy, which  
16 we've never developed.

17 MR. LEWIS: An itemized price list as well.

18 DR. SELIGMAN: Is there such a document?

19 MR. UPDEGROVE: That would be something that  
20 the contractor would have to develop. Your prices for  
21 those things would be different than another  
22 contractor.

23 DR. SELIGMAN: In terms of -- I thought I  
24 heard a request in there regarding providing "a matrix"  
25 that describes the current program comparing that to

1 what we're requesting.

2 I think we're going to let all of you use the  
3 information that is currently contained within the  
4 Federal Register to construct your own. Our desire was  
5 to provide sufficient information about the current  
6 programs, how it's run, the structure, and what our  
7 expectations are of the future so that each of you  
8 could hopefully make that crosswalk yourself.

9 And I think my desire at this point in time  
10 is not to commit staff resources to do that.

11 MR. LEWIS: Going back to the intent of my  
12 question, if there are current reports that are  
13 available to include those as part of the admission?

14 DR. SELIGMAN: Yes, that would be fine. What  
15 it is beginning to sound like is that there are some  
16 supplemental materials that need to be put together  
17 regarding existing contracts, annual reports other  
18 information.

19 Let me ask my folks in contracting. My  
20 presumption is we could put together such a packet of  
21 material and send it out with the applications that are  
22 requested? Is that an appropriate way to do it?

23 MR. UPDEGROVE: I think so. We're also going  
24 to have a package of application forms. If you want  
25 those, we'll send that out, and we'll send out any

1 other supplemental information. I think it will  
2 probably take us a month or so to prepare all these  
3 various documents and answer all these questions and  
4 make sure that everybody gets that as a supplement to  
5 the Federal Register Notice. It won't be contained in  
6 the Notice.

7 Other questions, comments?

8 MR. BEATTIE: I know that the  
9 transcriptionist is going to be happy to hear that I  
10 don't know if I have any other questions or comments.

11 I would just like to invite Dr. Williams and  
12 Ms. Kekuna to contact us if they would like any  
13 additional information about the program that we  
14 operate in 177. Any questions as you develop your  
15 proposals, either contact myself or Redwin or we can  
16 contact the folks in the Marshall Islands. They are a  
17 wealth of information on what we do, what has  
18 transpired over the last 10 years in our operations.

19 And, finally, I want to thank the Marshall  
20 Islands and the DOE for giving us the opportunity to  
21 ask these questions this morning. Thank you.

22 MR. BELL: I just wanted to add to that to  
23 make clear to everyone, that all of our patients in the  
24 Rongelap-Utrik Community who have received acute  
25 exposure are also patients of the 177 Health Care

1 Program. That's why there is a big synergy between  
2 what we do and what they do. And we're looking in this  
3 whole process to relieve some of the pressure of the  
4 referrals that we normally send to them for  
5 nonradiogenic conditions, to somehow be filled by some  
6 of the capabilities the new bidder might able to  
7 provide to alleviate some of that impact on the 177  
8 Program. But that's the way congress set up the two  
9 programs, and the intent was for nonradiogenic  
10 conditions to be referred back to the 177 Program.

11 So we're trying to creatively develop a  
12 process that works together as well and, certainly,  
13 shares a centralized record so that we're all aware of  
14 what's happening to a patient.

15 And I think you're well on the way to  
16 beginning to develop such a system. I appreciate that.  
17 Thank you.

18 DR. SELIGMAN: Any other final comments,  
19 questions? Let me take a quick moment to once again  
20 review the schedule from this point on.

21 As Gordon Benjamin mentioned, the  
22 representative from Rongelap, there's going to be a  
23 meeting here at 3:00 o'clock this afternoon with the  
24 two communities to meet with and discuss with the  
25 potential bidders. This room will be open at that

1 time, so avail yourself of that opportunity.

2 Once again, we will be accepting written  
3 comments to this proposed statement of work by August  
4 the 7th. The time to issue a final notice is sometime  
5 during the period of August 19 through the 31. Our  
6 hope is that the earlier we receive the comments, the  
7 earlier during this period we can issue our final  
8 notice.

9 After the issue of the final notice, we will  
10 schedule a site visit, and we'll be working with  
11 potential bidders for those who are interested in such  
12 a site visit. Our hope is that applications will be  
13 submitted during the month of September. And given  
14 that now there will be a site visit, there will be a  
15 45-day period for the applicants to submit their  
16 applications from the time the final notice is  
17 published.

18 We hope that they will be due sometime either  
19 the end of September or at the latest in October, at  
20 which point the review process will begin.

21 I have no other comments other than to thank  
22 you all for being here. Thank you very much all the  
23 senators and mayors and the ambassador and all. Thank  
24 you for your comments and questions.

25 On a personal note, I'm very excited about

1 this process. I think this is a wonderful opportunity  
2 to take a program that has been going on for 40 years  
3 and shift it and change it in a way that suits and  
4 meets the needs of the population, and particularly,  
5 the individual patients to the program as it moves on.

6 Rick, do you have any final comments?

7 MR. UPDEGROVE: I don't have anything.

8 DR. SELIGMAN: With that, we shall adjourn.

9 Again, transcripts of this session will be  
10 available within 10 days. And, Neil, do people have to  
11 make a formal request for the transcript? How are you  
12 going to handle that?

13 If you would like such a transcript, please  
14 advise Neil.

15 MR. BARSS: Yes, just advise me that you like  
16 a transcript and I'll get it out to you.

17 DR. SELIGMAN: You could advise Neil by  
18 telephone, letter, or E-mail.

19 And, again, thank you to the Oakland  
20 Operations Office, in particular, to the manager,  
21 Mr. Domagala, and to the staff that has supported us  
22 here.

23 Thank you very much.

24 (Whereupon, the meeting was adjourned at  
25 12:31 p.m.)
